SHIPPING.

THE EASTERN AND AUSTRALIAN MAIL STEAMSHIP COMPANY (Limited).
OVERLAND ROUTE via BRISBANE, NORTHERN QUEENSLAND PORTS, TORRES STRAITS, JAVA, and SINGAPORE, to EUROPE, INDIA, CHINA, JAPAN, and AMERICA.
The Company's magnificent new steamship
BOWEN, 1700 tons,
(built expressly for the trade),
Thomas Park, Esq., commander,
under contract with the Queensland Government, will be dispatched from the Cosmopolitan Wharf for
BRISBANE,
on MONDAY, 6th September, at 5 p.m.,
taking H.M. mails and passengers for above ports, and also goods and specie for Somerset, Java, Singapore, and Hongkong direct; or for transhipment to Europe, China, Japan, or America.
This Company, having effected satisfactory arrangements with the Messageries Maritime mail steamers, is prepared to book passengers at a through rate to Marseilles or any port at which the M. M. mail steamers call.
For full particulars as to rates of passage and other information apply to
SCOTT, HENDERSON, and CO., Agents.

EAST AND A.M.S. BOWEN, for COOKTOWN.—This steamer will call off COOKTOWN to land and receive passengers.
For rates of PASSAGE apply immediately to
SCOTT, HENDERSON, and CO., Agents.

PASSENGERS FOR COOKTOWN.—The E. and A.M.S. Company's magnificent steamer BOWEN, having unrivalled accommodation for STEERAGE passengers, will leave the Cosmopolitan Wharf at 5 p.m. prompt on MONDAY, 6th September.
SCOTT, HENDERSON, and CO., Agents.

CHINESE PASSENGERS FOR HONGKONG.—The E. and A. Company's steamer BOWEN leaves the Cosmopolitan Wharf on MONDAY, 6th September, punctually at 5 p.m., and has excellent accommodation.
PASSAGE MONEY (including provisions), £9 10s.
SCOTT, HENDERSON, and Co., Agents.

OVERLAND ROUTE TO EUROPE VIA SAN FRANCISCO AND NEW YORK.
The A. S. N. COMPANY'S Chartered Steamship
MACGREGOR, 2167 tons,
Horace Grainger,
will be dispatched from this port for
SAN FRANCISCO
(with her Majesty's mails), on SATURDAY, 25th September, at 1 p.m., via AUCKLAND and HONOLULU.
For rates of passage, and all information connected with the above, apply to
FREDK. H. TROUTON, Manager.

MAIL LINE ACROSS THE PACIFIC. THE AUSTRALASIAN STEAM NAVIGATION CO.'S
TIME TABLE
BETWEEN AUSTRALIA, NEW ZEALAND, AND CALIFORNIA.
The vessels of the Company leave Sydney (in New South Wales), calling at Auckland (in New Zealand), and Honolulu (in the Sandwich Islands), every 28 days, and San Francisco (in California), as under:

Leaves Sydney.		Leaves San Francisco.	
Macgregor	Sep. 26	Mikado	Aug. 16
Mikado	Oct. 23	Cyphrenes	Sep. 13
		City of Melbourne	Oct. 11
		Macgregor	Nov. 8
		Mikado	Dec. 6

N.B.—The sailing from San Francisco may be later if the English mail has not arrived.
A train leaves San Francisco for New York daily, with branch lines through the States, and powerful steamers leave the latter city daily for England, thus affording a speedy and enjoyable trip to Europe.
Intending passengers from Europe and America are informed that the Company's local fleet trade from Sydney to all ports of the Australian colonies, by which means prompt connection is made with the above lines.
FREDK. H. TROUTON, Manager.

PRELIMINARY ANNOUNCEMENT.
FOR SALE, by tender, the Barque NAPTHALIS, due from Foo Chow about the 18th September. This barque was built for the late Henry Hopkins, Esq., of Hobart Town, in the latter part of 1872, by Messrs. H. and D. Mackey, of Hobart Town. No expense was spared in the building of the Nautilus, so as to combine speed and strength, having the whole of the principal binders, viz., keel, keison, clamp, stringers, waterway, &c., running the whole length of the ship, in one piece; she was built under special survey for Lloyd's, and received the highest class given to vessels built in the colonies. All the materials and appliances are the best, and of the latest improvements, the fastenings being all of copper.
The dimensions are as follow:—
120 feet between perpendiculars
14 feet depth of hold
26 feet beam.
Register, 342 tons, carry 350, dead weight.
Further particulars, together with inventory of stores &c., will be obtainable upon the arrival of the vessel upon application to
P. O. FYSH and CO.,
1, Queen-street, Melbourne.

SHIP SURREY, from London.—All accounts against the above vessel must be rendered in duplicate to the undersigned before Noon on MONDAY, the 6th instant, or they will not be recognised.
G. A. LLOYD and CO., Agents.

FOR SALE, FREIGHT, or CHARTER, the smart British-built three-masted schooner SMILING MORN, of 250 tons gross register. Apply to SMITH, BROTHERS, and CO., 14, Macquarie-place.

FLOATING DOCK, DERLING HARBOUR.—THOMAS S. ROWNTREE and CO., Wood and Composite Shipbuilders and Blacksmiths. Ships of any size docked; repairs and work efficiently carried out on the most reasonable terms. Masts, spars, and ship timber of every description always on hand.

MEETINGS.

PUBLIC NOTICES.

No. 76-46. Town Clerk's Office,
Sydney, 3rd September, 1875.
CRICKET SEASON—MOORE PARK.—MEMBERS OF CRICKET CLUBS and others desiring to play on Moore Park, are informed that, in order to prevent the inconvenience arising from their playing in too close proximity to each other, the Ranger has been instructed to make such arrangements for their accommodation as the space of ground will allow; but the ground on the northern and eastern sides is appropriated for ladies and children. It is requested that all applications for permission to play may be made to the Ranger before occupying any portion of the Park.
THOS. A. BUTTERFIELD, Town Clerk pro tem.

TICKETS will be issued at all Stations beyond Parramatta Junction to SYDNEY, on FRIDAY, SATURDAY, MONDAY, and TUESDAY next, the 3rd, 4th, 6th, and 7th September, at a SINGLE FARE for the DOUBLE JOURNEY, available for return until the 13th instant.

JOHN RAE, Commissioner for Railways.
Department of Public Works,
Railway Branch, Sydney, September 1st, 1875.

The Treasury, New South Wales,
Sydney, 31st August, 1875.

CONTRACTS FOR THE PUBLIC SERVICE.—ORPHAN SCHOOLS, PARRAMATTA.—NOTICE is hereby given that TENDERS will be received at this office, until noon of TUESDAY, the 7th September, for furnishing, on account of the Public Service, the supplies undermentioned, in such quantities as may be required during eight calendar months, from 7th September, 1875, to 31st March, 1876, upon the conditions hereinafter specified,

At the foot of every tender there must be a memorandum signed by the party tendering, and two responsible persons as sureties, agreeing to be responsible for the due performance of the contract, in the event of the tender being accepted, and undertaking in that event, that they will severally execute and deliver, within one month from the usual notification of acceptance, a bond to her Majesty for securing such performance otherwise the tender will not be taken into consideration.

The tenders to contain the names of the tenderers and their sureties and places of residence at length.

Each tender must be in the form provided, enclosed in a separate envelope, and marked "Tender for Provisions, &c."

Printed forms of tender, as well as any further particulars and information, may be obtained on application at the Treasury.

It is to be distinctly understood that the Government will not necessarily accept the lowest or any tender.

N.B.—Accepted Tenders will be notified in the GOVERNMENT GAZETTE, and such notice will be considered as an intimation also to unsuccessful tenderers that their tenders have been declined.

AS REQUIRED.
SECTION I.

Fresh beef	Per lb.
Salt ditto	Ditto
Salt pork	Ditto
Fresh mutton	Ditto
Bullock shins	Each
Suet (kidney) beef	Per lb.
Lard	Ditto.

For conditions of contract, &c., see GOVERNMENT GAZETTE of 3rd September, 1875.

WILLIAM FORSTER.

TENDERS.

TO BUILDERS.—Separate TENDERS are invited for the Brickwork, Plastering, Slating, and Finishing Trades, of Wesleyan Church at Windsor. Plans and specifications to be seen at the premises of Mr. W. DEAN Windsor; and 133, Pitt-street, Terry's chambers, where tenders must be sent on 17th instant.

WILLIAM BOLES, Architect

TO SPECULATORS, CAPITALISTS, and others.

TO BOILER-MAKERS, ENGINEERS, &c.—TENDERS will be received by the undersigned until noon, on SATURDAY, the 18th September, 1875, from persons willing to construct BOILERS for the steamships MORPETH and CITY OF NEWCASTLE, OR FOR EITHER VESSEL, including the removal and landing of old boilers, and placing on board and fitting and connecting new boilers, and other work, according to plans and specifications which may be seen and copied at the H. R. N. S. N. Co.'s Office, foot of Market-street.

The Company will not be bound to accept the lowest nor any tender.

F. J. THOMAS, Manager.
Sydney, 28th August, 1875.

No. 75-44. Town Clerk's Office,
Sydney, 3rd September, 1875.

TO CONTRACTORS and STONEMASONS.—TENDERS will be received at this office, until 12 o'clock noon, on THURSDAY, the 9th instant, for the performance of the undermentioned works, in accordance with the Plans and Specifications, to be seen at the office of the City Surveyor, viz.:—

1. Building Retaining Wall, Sussex and Market streets.
2. Paving footpaths during the remainder of year, 1875.

THOS. A. BUTTERFIELD,
Town Clerk pro tem.

TO CARPENTERS.—TENDERS are required for making the FITTINGS in All Saints' Church, Woollahra. Plans and specifications to be seen on application to Mr. EDMUND T. BLACKET, Pitt-street, to whom tenders are to be addressed on or before WEDNESDAY, September 15.

TO THE MEDICAL PROFESSION.—TENDERS required for a Medical Officer to attend upon the members, their wives, and families of Court Royal Plant O. R. F. Tenders to be sent in on or before the 22nd instant, addressed to Mr. JOHN KELLY, 21, Cooper-street, Strawberry Hill.

RUBY TIN MINING COMPANY (Limited).—TENDERS are invited for the purchase of the above Company's Mine, consisting of 80 acres of freehold land, situated on Sugarloaf and Thirteen-mile Creeks, near Stanthorpe; also for all Plant, Tools, &c., thereon. Tenders to be addressed to the undersigned up to THURSDAY, September 30, and from whom any further information can be obtained. The highest or any tender not necessarily accepted.

HARDIE and GORMAN, Bell's-chambers, Sydney.

TO BUILDERS.—Tenders are invited for the erection of a 6-roomed HOUSE, at Newtown. Plans and specification may be seen at Mr. Reynolds's Tower Inn, George-street South, opposite Railway gates.

TENDERS required for the stonework of six houses. Apply at the Cornet Hotel, corner of Albion and Macquarie streets South.

EIGHT-HOUR DEMONSTRATION.

TO BANDMASTERS.—Tenders are invited for a Band to perform at the above, to be held on MONDAY, October 4. Tenders to state the number of performers they are willing to supply. Tenders to be sent in on or before WEDNESDAY next, addressed to

ROBERT MURRAY,
Secretary.
M'Master's Swan with Two Necks, George-street.

TENDERS wanted for plastering a 6-roomed House. Apply corner Cooper and Waterloo streets, S. Hills.

TO BOILERMAKERS.—TENDERS required for the construction of a Marine Boiler, for Mr. Dalton. Plan and specification to be seen at the office of Messrs. POTTS and PAUL, Erskine-street.

TENDERS will be received at the offices of the undersigned until 12 o'clock (noon), 8th instant, for the supply to the ship RESULT of sails, as per specification to be seen at our offices.

WILLIAM LAIDLEY and Co., Exchange,
as Agents.

TENDERS required to 8th instant for the Erection and Completion of a Weatherboard Cottage in Walker-street, North Shore. Plans and specification at J. SHEARER'S, Upper William-street South.

MUSICAL INSTRUMENTS.

SYDNEY PIANOFORTE WAREHOUSE,
218, Pitt-street, Sydney.

MAYER and CO. (A. C. Huenerbein) respectfully invite the public to inspect their magnificent stock of PIANOFORTES and HARMONIUMS. Pianofortes by German, English, and French makers. Harmoniums by the celebrated German maker,

P. J. TRAYSER.

All goods sold at 218, Pitt-street, will be guaranteed to stand the effects of the climate of Australia.

M. and CO., Sole Agents for BLUTHNER, PFEIFFER, SCHWECHTEN, HARTMANN, and KRIEBEL.

Note the Address—
218, Pitt-street, Sydney;
and 87, Russell-street, Melbourne.

IMPORTANT NOTICE TO THE PUBLIC OF SYDNEY AND NEW SOUTH WALES.

MAYER and CO. (A. C. Huenerbein) have great pleasure in announcing to the PUBLIC in general that they have been appointed SOLE AGENTS in SYDNEY for GEO. WOODS and CO.'S celebrated AMERICAN CHURCH and PARLOUR ORGANS.

These instruments possess many recommendations for use in CHURCHES and HALLS, as well as in the PARLOUR. They are very powerful, their quality of tone is most BEAUTIFUL, EXCELLENCE of all MATERIAL used, thorough CONSTRUCTION FINISH, and ELEGANCE of DESIGN, compared with cheapness in comparison with other instruments of well-known makers.

N.B.—Catalogues forwarded on application.

Note the Address

Tarpaulin canvas, 24 and 30 inches wide
Cape waggon canvas, 30 inch
TARPAULINS, all sizes; and canvas ore bags
Superior navy duck for boat sails
CABLE CHAINS, with BOARD OF TRADE certificate
ANCHORS, ditto ditto ditto
Black and galvanized close coil chains, from 3-16 upwards.
The trade supplied at lowest wholesale prices.
BUZACOTT and ARMSTRONG, Importers, Sydney.

PINEAPPLE RUM, old and very fine, for family use one-dozen cases, 42s. At Stores, 8, King-street.

PRODUCE, PROVISIONS, ETC.

ADELAIDE FLOUR.—Hart's, Magarey's, Duffield's, Darling's, Warren's, Crawford's, Palmer's, Rowett's.
GEO. A. LLOYD and CO.

PRIME New Zealand Oatmeal, landing ex Rasby, 14, and 28 lb. packages. C. Wilson, 64, Margaret-st.

ADELAIDE WHEAT and FLOUR.—Hart's, Clark's, Palmer's, Colman's. C. WILSON, 64, Margaret-st.

VINEGAR, in bulk and bottle. D. J. MONK, Australian Vinegar Works, Sussex-st. and Barker's-lane.

FLOUR.—Magarey and Co.'s celebrated Adelaide Flour on SALE.
BRIGHT, BROTHERS, and CO., Agents,
52 Pitt-street.

HENRY AND YEO,
MILLERS and FLOUR MERCHANTS,
City Mills, Duncan-street,
off Bathurst-street West.
Superfine silk-dressed Flour, Bran, Pollard, &c. The best qualities at the lowest prices.

PRESERVED BEEF and MUTTON, in 4 and 6lb. tins
MINCED COLLOPS, in 2 lb. For SALE by
HENRY BEIT and CO., 62, Margaret-street.

ADELAIDE WHEAT and FLOUR—Hart's, Duffield's, Magarey's. W. DRAITT, 123, Pitt-street.

SILK-DRESSED Superfine FLOUR, Seconds, Wheat Meal, Maize Meal, also Patent Meal, Bran, and Pollard, best qualities, at the lowest price. J. REDGATE and SON, Sussex-street South, and Turong-street.

COLONIAL TOBACCOS, best brands, on SALE
THOMAS SAYWELL, 4, Park-street.

PRIME HOBART TOWN OATEN HAY.—A small shipment for SALE, ex Smiling Morn, at Circular Quay. T. and W. WILLIS, 48, Pitt-street.

ON SALE, Hart's, Dunn's, Mergery's, Duffield's, Warren's Hovle's, Fergusson's, Hawke's, Stange's superfine Adelaide FLOUR; also Adelaide and Tasmanian WHEAT. NIPPER and SEE, 123, Sussex-street.

POTATOES.—Prime sample from Circular Head, now landing. HENRY CLARKE, Victoria Wharf.

COLONIAL TOBACCO, best brands. O'DOUD and CO., Commercial Wharf.

BUILDING MATERIALS.

SLATES, 16 x 10 to 24 x 12, best, at reduced prices
Drain Pipes, Cement, Plaster, Zinc, Lead, G. O. and Orb Iron, all lengths; Lath Nails, Register Grates, &c.
G. E. CRANE and SON, New Pitt-street, Circular Quay.

ORIENTAL PAPERHANGING, a new style of decoration, at Stuart and Bateman's, 158, Pitt-st.

FOREIGN and Colonial TIMBER, Doors, Sashes, &c.
W. H. ROLFE, Circular Quay.

SHINGLES.—Best (very thick) F. O. SHINGLES for SALE. S. PILE, Patent Slip Wharf.

CEDAR, all sizes, seasoned; Turnery, every pattern. STEWART'S Cedar Yard, Pitt-street.

200,000 FRET T. and G. Colonial and Maryborough flooring, lining.
Oregon spars, planking, scantling, &c.
PALINGS, 5 and 6 feet, shingles, laths, pickets, &c.
BALTIC DEALS and 9 x 3, red deals
BALTIC G. and T. boards, 12, 1, ¾, ½ and ¾ inch
DOORS, SASHES, mouldings, architraves, skirting, &c., on hand and made to order
GALVANIZED plain and corrugated iron, ridging, spouting, ½ and 1 inch galvanised water pipe and fittings
CEMENT, best Portland, and Keene's cement, plaster, &c
SHEET LEAD and zinc, assorted sizes
DRAIN PIPES, all sizes; chimney pots; paving tiles fire and building bricks, &c.
TURNERY of every description, in cedar and pine.
GOODLET and SMITH, Victoria Saw and Joinery Mills, Pyrmont, 488, George-street, and 7, Parramatta-st.

BRITISH PLATE and Sheet Glass Warehouse.—The largest and best assorted stock in the colony. Oils, Leads, Colours, Brushware, Paperhangings, &c. JAMES SANDY and CO. (late Thomas Edens), 255, George-st.

MARBLE and SLATE CHIMNEYPIECES, new designs, just landed. W. CARY, Railway Bridge.

SLATES, Cement, Sheet Lead, Zinc, Black and Galvanized Tubing, all sizes. W. CARY, Railway Bridge.

LIME.—Marble Lime, just landed; also PORTLAND CEMENT, best, at Marble Lime Depot, 8, King-st.

HOUSES AND LAND FOR SALE.

FOR SALE, two small three-roomed HOUSES. Inquire 18, Riley-street.

LAND SUBDIVIDED for immediate SALE. GEO. BISHOP, Surveyor, 183, Pitt-street.

FOR SALE or to LET, in the town of Muswellbrook, the Store and Premises known as CAMPBELL'S OLD STORE. For further particulars apply to DAVID FERGUSON, Aberdeen.

FOR SALE, a Terrace, comprising Shop and 5 Dwelling-Houses, situate in Albion-st., Surry Hills, rental weekly £6 5s, terms £700 cash, balance 5 years at 8 per cent.; 2 Houses, Elizabeth-st. South, rental £1 10s per week, price £475; Hotel and 2 Houses at Miller's Point, price £1660; House, 6 rooms, at Darlinghurst, £450; House, 5 rooms, in Darlinghurst-street, £375; House, 5 rooms, Victoria-street, Darlinghurst. WALTER COOK, 174, Pitt-street.

FOR POSITIVE SALE, four first-class Family RESIDENCES, each containing 12 rooms, &c., replete with every convenience, situate at the corner of Elizabeth and Bridge streets, and now occupied by the Government at rental of £725 per annum, clear of all rates and taxes: terms, £2500 cash, balance may remain secured by mortgage on property for 3 years, bearing interest at the rate of 6 per cent. per annum. Walter Cook, 174, Pitt-st.

PROPERTIES FOR SALE.
PETERSHAM—Detached COTTAGE, 4 rooms 15 x 12, 2 ditto 12 x 12, kitchen, store-room, bath-room, &c., verandahs back and front, large allotment, £750.
PETERSHAM, near the Station.—ALLOTMENTS, 33 x 130 feet, £25.
BRIGHTON HEIGHTS, Manly.—ALLOTMENTS 200 feet to 330 feet deep, 2s 6d per foot.
NORTH SHORE.—Fine Block of Land, near the residence of W. Williams, Esq., 50s per foot.
GEORGE PILE, Jun., 62, Margaret-street.

NOTICE.—Several Cottages and Houses, attached or detached, wanted, from £50 to £65 per annum, near city; also, Houses and Cottages near railway, from £72 to £120 per annum. E. Ramsay, house agent, 410, Geo.-st.

STOCK AND STATIONS.

FOR PRIVATE SALE.
The GNOMESTRICK and ROCKEY PLAINS STATIONS, district of Mandoo, New South Wales, with 20,000 sheep, more or less, 13,000 acres of purchased and selected land, a great part of which is improved with English grasses, cultivation, fencing, &c., &c., &c.
The improvements at the head station are extensive, and consist of an excellent eight-roomed stone house, large store, coachhouse, stable, and all other requisite conveniences and outbuildings.
Five miles distance from the above there is an excellent five-roomed stone cottage, and most extensive and substantial outbuildings. In the vicinity of the cottage there are very large and well grassed and watered paddocks.
This property is for bona fide SALE, to close partnership accounts. Intending purchasers are therefore requested to make an early inspection. Further particulars can be obtained from the owners,
Messrs. BROOKS, BROTHERS, Gegedzerick, near Cooma.

FOR PRIVATE SALE.—To close partnership accounts, the well-known STATIONS of Gejeozerick and Rocky Plain, Monaro District, with 20,000 sheep, 500 cattle, 11,470 acres purchased and selected land, &c., &c.
For full particulars apply to
BROOKS, BROTHERS, Gejeozerick, Cooma.

SPRINGERS AND MILKING COWS.
For SALE by the undersigned, at Rockwood, a number of the above.
For further particulars, apply to
G. F. WANT, Rockwood, Campbelltown, or 278, George-street, Sydney.

FOR SALE, by private contract, a splendid SHEEP PROPERTY; 72,000 sheep, all in paddocks. Full particulars on application to SULLIVAN and SIMPSON, 400, George-street.

FOR PRIVATE SALE.
First-class Fattening Property, on Queensland Border, with 30,000 sheep, 2000 cattle
A first-class Sugar Plantation, near Port Mackay
Estate, near Braidwood, 6000 acres, highly improved
Numerous other Properties, both in New South Wales and Queensland.
Also, the following Stock:—
2400 first-class Store Bullocks } From the noted Tabulam
1000 splendid Heifers } Station, Clarence River
400 Bullocks, Richmond River
10,000 store sheep, Liverpool Plains
1000 splendid Heifers } Maryborough, Queensland
1200 splendid Bullocks }
Store Sheep and Cattle, in Queensland, various lots
First-class Bulls, in various localities.
G. N. GRIFFITHS, 271, George-street.

1000 BULLOCKS from the 3L (conjoined) (late CXS herd), Clarence River, for SALE by P. N. TREBECK, Stock and Station Agents, Squatters' Exchange, George-street.

CATTLE STATION.—For PRIVATE SALE, a first-class fattening Station, with extensive frontages to the Barwon River, 4500 head of well-bred cattle and 2000 sheep.
For further particulars and price, apply to
H. and F. WEAVER,
Stock and Station Agents,
West Maitland.

PUBLIC COMPANIES.

INDUSTRIAL AND PROVIDENT PERMANENT BUILDING AND INVESTMENT SOCIETY.
NOTICE.—Deposits received to any extent. Special Rates on application.
By order of the Board,
WILLIAM JARRETT, Manager.
Offices, Park-street, one door from George-street.

IMPERIAL MARINE INSURANCE COMPANY (Limited).
Chief Offices—Liverpool and London.
MARINE RISKS accepted, and policies issued at the lowest rates of premium.
MACKENZIE, GODDARD, and CO., Agents.
Exchange, Sydney.

FIRE and LIFE INSURANCE and ANNUITIES.—The Liverpool and London and Globe Insurance Company.
A. STANGER LEATHES, Resident Secretary,
corner of Pitt and Spring streets.

NOTES OF THE WEEK.

AT the Sydney Water Police Court a man has been fined £7 9s., for beating a goat so as to break two of its legs.

A man named Macdonald has been burnt at Lane Cove through falling into a fire.

The Hobart Town *Mercury* regrets that the efforts made to represent Tasmania at the forthcoming Balmain regatta have failed.

The weather in the Clarence district has been very changeable.

A new gold reef has been discovered in Riverina.

Several cases of pocket-picking are said to have occurred at the late Singleton Show.

A man named Rice died in the lockup at Darlinghurst from consumption.

William Shearhan died, at Goulburn, from injuries received at a bark-mill at Gillespie's tannery.

Dr. Muller, of Sydney, is dead.

The *Goulburn Herald* speaks highly of the tweeds from the Cowerwull tweed factory at Bowenfells.

The *Border Post* complains of the scarcity of labour in Riverina.

An old Brisbane Justice of the Peace has given it as his opinion, as stated in the *Telegraph*, that there is more drunkenness in the capital of Queensland than in Sydney.

Fish are being sold in Goulburn, which have been preserved by Mr. Mort's freezing process.

The *Colac Herald* says that Mr. Tyson, squatter, of New South Wales, Victoria, and Queensland, is possessed of 87,000 cattle and over a million of sheep.

Mr. John Young writes from London to the *Sydney Morning Herald* a letter, containing some valuable suggestions as to the paving of the streets of Sydney.

Shearing has commenced on several of the large stations in the neighbourhood of Corowa.

A free selectors' association is being formed at Jindera.

Mr. Garrett's constituents at Picton, have entertained that gentleman at a banquet. He has also been banqueted at Berrima.

Two men have been almost smothered in a drive at the Wapping Butcher (Parkes), while one has been killed.

The New England steamer has grounded at the Clarence Heads.

At the present time there is a vast quantity of water stored on the Botany and Lachlan watersheds.

The Volunteer Engineers of New South Wales have, in a match with their Victorian brethren, defeated them by 42 points.

There has been a disastrous fire at Ben Lomond, New England.

The *Bega Times* has a pithy article on sly grog selling.

The Society for the Prevention of Cruelty to Animals has held its annual meeting: Sir Alfred Stephen in the chair.

The fifteenth annual meeting of the Sydney Ragged Schools has been held in the Temperance Hall, Mr. J. C. Raymond presiding.

The manufacture of sparkling wines has been inaugurated in Albury.

The Bishop of Bathurst has started on a tour to Bourke and Wilcannia.

William Archer has been crushed to death by a fall of earth in a brickyard at Bathurst.

In Melbourne damages to the extent of £20 have been given against the Bank of New South Wales for dishonouring a cheque.

A deputation has waited upon the Minister for Works with reference to the erection of the proposed bridges across the Parramatta River.

A case of snake-bite is recorded as having taken place in the township of Teuterfield.

On Monday evening last, a complimentary tea was given to Mr. Davies, M

LIFE, PAST AND FUTURE, IN OTHER WORLDS.

(From the Cornhill for June.)

During the summer months of this year two planets will be conspicuous which illustrate strikingly the varieties of condition distinguishing the members of the solar system from each other. One is the planet Jupiter, at his nearest and brightest in the middle of April, but conspicuous as an evening star for several months thereafter; the other is the planet Mars, shining with chief splendour towards the end of June, but distinguishable by his brightness and colour for several weeks before and after that time. We have had occasion to consider these two planets in three essays in these pages. The first, called "Life in Mars," in the *Cornhill Magazine* for May 1871, dealt with the theory that life probably exists in Mars. This theory, which may be called the Brewsterian theory, was not viewed unfavourably in the essay; for in fact the writer at that time regarded the theory as on the whole more probable than Whewell's. The second essay, which related to the planet Jupiter, bore the title "A Giant Planet," and appeared in the *Cornhill Magazine* for May, 1872. In this essay, the largest of all the planets was certainly not presented as the probable abode of life, though, on the other hand, the theory advanced respecting Jupiter could hardly be called a Whewellite theory. For Whewell, as our readers doubtless remember, advanced the theory that the globe of Jupiter probably consists in the main of water, with perhaps a cindery nucleus, and maintained that if any kind of life exists at all in this planet, its inhabitants must be pulpy, gelatinous creatures, living in a dismal world of water and ice; whereas we pointed to evidence showing that an intense heat pervades the whole globe of Jupiter, and causes disturbances so tremendous that life would be impossible there even if we could conceive the existence of creatures capable of enduring the planet's fiery heat. Yet a year later there appeared in the *Cornhill Magazine* for July, 1873, a Whewellite essay on Mars, in which we dealt with certain considerations opposed to the Brewsterian theory that life probably exists on the ruddy planet. Without absolutely adopting Whewell's view, we discussed those facts which "would certainly not be left untouched by Whewell if he now lived and sought to maintain his position against the believers in 'more worlds than one.'"

Those three essays illustrate, but do not strictly synchronize with, the gradual change in the writer's ideas respecting the subject of life in other worlds. In fact, so far back as the close of the year 1869 he had begun to regard doubtfully the theory of Brewster, which until then had appeared on the whole the most reasonable way of viewing the celestial bodies. The careful study of the planets Jupiter and Saturn had shown that the theory of their being the abode of life (that is, of any kind of life in the least resembling the forms we are familiar with) is altogether untenable. The great difference between those planets and the members of the smaller planetary family of which our earth is the chief, suggested that in truth the major planets belong to another order of orbs altogether, and that we have as much or as little reason for comparing them to the earth on which we live. Nevertheless, in the case of Venus and Mars, the features of resemblance to our earth predominate over those of dissimilarity: and it was natural that the writer, while rejecting the theory of life in Jupiter or Saturn as opposed to all the available evidence, should still consider the theory of life in Mars or Venus as at least plausible. Ideas on such subjects are not less tenacious than theories on matters more strictly scientific. Not only so, but the bearing of newly recognised facts on long-entertained theories is not at once recognised even by those most careful to square their opinions according to the evidence they are acquainted with. Again and again it has happened that students of science (in which term we include the leaders of scientific opinions) have been found recording and explaining in one chapter some newly recognised fact, while in another chapter they have described with approval some old theory, in total forgetfulness of the fact that with the new discovery the old theory has become altogether untenable. Sometimes the incongruity is not recognised until it has been pointed out by others. Sometimes, so thoroughly do our prepossessions become "bone of our bone and flesh of our flesh," that even the clearest reasoning does not prevent the student of science from combining the acceptance of a newly-discovered fact with continued belief in a theory which that fact entirely disproves. Let the matter be explained as it may, it was only gradually that both the Brewsterian and Whewellite theories of life in other worlds gave place in the writer's mind to a theory in one sense intermediate to them in another sense opposed to both, which seems to accord better than either with what we know about our own earth, about the other members of the solar system, and about other suns which people space. What we now propose to do is to present this theory as specially illustrated by the two planets which adorn our evening skies.

But it may be asked at the outset, whether the question of life in other worlds is worthy of the attention thus directed to it. Seeing that we have not, and can never have, positive knowledge on the subject, is it to be regarded as, in the scientific sense, worthy of discussion at all? Can the astronomer or the geologist, the physicist or the biologist, know more on this subject than those who have no special knowledge of astronomy, or geology, or physics, or biology? The astronomer can say how large such and such a planet is, its average density, the length of its day and its year, the light-reflecting qualities of its surface, even with the physicist's aid, the nature of the atmosphere surrounding it, and so on. The geologist can tell much about the past history of our own earth, whence we may infer the variations of condition which other earths in the universe probably undergo; the physicist, besides aiding the astronomer in his inquiries into the condition of other orbs, can determine somewhat respecting the physical requirements of living creatures; and the biologist can show how the races inhabiting our earth have gradually become modified in accordance with the varying conditions surrounding them, how certain ill-adapted races have died out while well-adapted races have thriven and multiplied, and how matters have so proceeded that during the whole time since life began upon our earth there has been no danger of the disappearance of any of the leading orders of living creatures. But no astronomer, or geologist, or physicist, or biologist, can tell us anything certain about life in other worlds. If a man possessed the fullest knowledge of all the leading branches of scientific research, he would remain perfectly ignorant as to the actual state of affairs in the planets even of our own system. His ideas about other worlds must still be speculative; and the most ignorant can speculate on such matters as freely as the most learned. Indeed the ignorant can speculate a great deal more freely. And it is here, precisely, that knowledge has the advantage. The student of science feels that in such matters he must be guided by the analogies which have been already brought to his knowledge. If he rejects the Brewsterian or the Whewellite theory, it is not because either theory is a mere speculation for which he feels free to substitute a speculation of his own; but because, on a careful consideration of the facts, he finds that the analogies on which each theory was based were either insufficient, or were not correctly dealt with, and that other analogies, or these when rightly viewed, point to a different conclusion as more probable.

Nor need we be concerned by the consideration that there can be no scientific value in any conclusion to which we may be led on the subject of life in other worlds, even though our method of reasoning be so far scientific that the argument from analogy is correctly dealt with. If we look closely into the matter, we shall find that as respects the great purposes for which science is studied, it is as instructive to think over the question of life in other worlds as to reason about matters which are commonly regarded as purely scientific. It is scientific to infer from observations of a planet that it has such and such a diameter, such and such a mass; and thence to infer that its surface contains so many millions of square miles, its volume so many millions of cubic miles, its mass so many billions or trillions of tons; yet these facts are not impressive in themselves. It is only when we consider them in connection with what we know about our own earth that they acquire meaning, or at least that they have any real interest for us. For then alone do we recognise their bearing on the great problem which underlies all science,—the question of the meaning of the wonderful machinery at work around us: machinery of which we are ourselves a portion.*

* It has often seemed to us that a description, by the close observer, Dickens, of the fancies of a brain distempered by fever, corresponds with feelings which the student of science is apt to experience as the sense of the awful mystery of the universe impresses itself on his soul:—"The time seemed interminable. I contemplated impossible existences with my own identity. . . . I was as a steel beam of a vast engine, clashing and whirling over a gulf, and yet I implored in my own person to have the engine stopped and my part in it hammered off." Of all the wonders that the student of science deals with, of all the mysteries that perplex him, is there ought more wonderful, more perplexing, than the thought that he, a part of the mighty machinery of the universe, should anxiously inquire into its nature and motions, should seek to interpret the design of its Maker, and should be concerned as to his own share in the working of the mysterious mechanism?

In suggesting views respecting Jupiter and Mars unlike those which have been commonly received with favour, it is not by any means our purpose, as the reader may anticipate, to depart from the usual course of judging the unknown by the known. Although that course is fraught with difficulties, and has often led the student of science astray, it is in such inquiries as the present the proper, one may almost say the only course. The exception we take to the ordinary views is not based on the fact that too much reliance has been placed on the argument from analogy, but that the argument has been incorrectly employed. A just use of the argument leads to the conclusions very different from those commonly accepted, but not less different from that theory of the universe to which Whewell seems to have felt himself driven by his recognition of the illogical nature of the ordinary theory respecting the plurality of worlds.

Let us consider what the argument from analogy really teaches us in this case.

The just use of the argument from analogy requires that we should form our opinion respecting the other planets chiefly by considering the lessons taught us by our own earth, the only planet we are acquainted with. Indeed, it has been thus that the belief in many inhabited worlds has been supported; so that if we employ the evidence given by our own earth, we cannot be said to adopt a novel method of reasoning, though we may be led to novel conclusions.

The fact that the earth is inhabited, affords, of course, an argument in favour of the theory that the other planets are also inhabited. In other words, a certain degree of probability is given to this theory. But we must look somewhat more closely into the matter, to ascertain what that probability may amount to. For there are all orders of probability, from uncertainty down to a degree of probability so low that it approaches closely to that extremest form of improbability which we call impossibility. It is well at once to take this logical basis; for there are few mistakes more mischievous than the supposition that a theory supported by certain evidence derives from that evidence a probability equal to that of the evidence itself. It is absolutely certain that the one planet we know is inhabited; but it by no means follows certainly that planets like the earth support life, still less that planets unlike the earth do so, and least of all that every planet is now the abode of life.

A higher degree of probability in favour of the theory that there are many inhabited worlds arises from a consideration of the *manner* in which life exists on earth. If one could judge of a *purpose* (according to our way of thinking) in all that is going on around us, our earth might teach us to regard the support of life as Nature's great purpose. Earth, water, and air, alike teem with life. No peculiarities of climate seem able to banish life. As we have said elsewhere, "in the bitter cold within the Arctic regions, with their strange alternations of long summer days and long winter nights, their frozen seas, perennial ice, and scanty vegetation, life flourishes in a hundred different forms. On the other hand, the torrid zone, with its blazing heat, its long-continued droughts, its strange absence of true seasonal changes, and its trying alternations of oppressive calms and fiercely raging hurricanes, nourishes even more numerous and varied forms of life than the great temperate zones. Around mountain summits as in the depths of the most secluded valleys, in mid-ocean as in the arid desert, in the air as beneath the surface of the earth, we find a myriad forms of life. Nor is the scene changed when, with the mind's eye, we contemplate the earth during past ages of her history, even to the most remote stage of her existence, as a planet fit to be the abode of life. Wherever there was life at all, there was abundant life. For though no traces remain of a million forms of life which co-existed with the few forms recognised as belonging to this or that geologic era, yet we can infer from the forms of which traces remain that others must have been present which have left no traces of their existence. The skeletons of mighty carnivora assures us that multitudes of creatures existed on which those monsters fed. The great sea creatures whose remains have been found attest the existence of many races of small fish. The mighty Pterodactyl did not range through desert aerial regions, for he could exist only where many orders of aerial creatures also existed. Of minute creatures inhabiting the water we have records in the strata formed as generation after generation sank to the sea-bottom after death, whereas the correspondingly minute inhabitants of the land and of the air have left no trace of their existence; yet we can feel no reasonable doubt that in every geologic age forms of minute life were as rich in air and on the land as in the sea, or as they now are in all three. Of insect life all but a few traces have passed away, though occasionally, by some rare accident, even so delicate a structure as a butterfly's wing has left its record, not only attesting the existence of hosts of insects, but showing that delicate flowers with all the charms of sweet perfume and variegated colour existed in those times as in ours. It is no mere speculation, then, but the direct and unquestionable teaching of geology, that throughout the whole time represented by the fossiliferous rocks, life of all kinds was most abundant on our earth.

And while we thus recognise throughout our earth's history as a planet, Nature's apparent purpose of providing infinitely varied forms of life at all times and under the most varied conditions, we also perceive that Nature possesses a power of modifying the different types in accordance with the varying conditions under which they subsist. Without entering here into the vexed question of the actual extent to which the principle of selection operates, we must admit that it does operate largely, and that it must necessarily cause gradual change of every type of living creature towards the most suitable form. This particular operation of Nature must certainly be regarded as an apparent carrying out of the purpose attributed to her by our manner of speaking when we say that Nature's one great object is the support of life. If types were unchangeable, life would come to an end upon a globe whose condition is not only not unchangeable, but changes largely in the course of long periods of time. But types of life change, or can change when required, at least as quickly as the surrounding conditions—save in the case of certain catastrophes, which, however, never affect any considerable proportion of the earth's surface.

Nor is it easy to assign any limits to this power of adaptation, though we can scarcely doubt that limits exist. The earth may so change in the course of hundreds of thousands of years to come that none of the chief forms of life, animal or vegetable, at present existing, could live even for a single year under the changed conditions of those distant times, while yet the descendants of creatures now living (including man) may be as well fitted to the circumstances around them as the most favoured races of our own time. Still there must be a limit beyond which the change of the earth's condition, whether through the cooling of her own globe or the diminution of the sun's heat, will be such that no conceivable modification of the types of life now existing could render life possible. It must not be forgotten that Nature's power of adaptation is known to be finite in many cases, and, therefore, must be presumed to be finite in all cases. The very process of selection by which adaptation is secured implies the continual failure of preceding adaptations. The struggle for life involves the repeated victory of death. The individuals which perish in the struggle (that is, which perish untimely) far outnumbered those which survive. And what is true of individuals is true of types. Nature is as wasteful of types as she is of life—

> So careful of the type; but no,
> From scarped cliff and quarried stone
> She cries, "A thousand types are gone;
> I care for nothing, all shall go."

This is, in truth, what we must believe, if, reasoning by analogy, we pass but one step higher in the scheme of creation. We know that Nature, wasteful of individual life is equally wasteful of types of life. Must we not infer that she is no less wasteful of those aggregations of types which constitute the populations of worlds? Watching her operations a few brief minutes we might (setting experience aside) suppose her careful of individual life. Watching during a few generations, we should pronounce her careful of the type, though careless of life. But we perceive, when we extend the range of time through which we look, that she is careless no less of the type than of life. Why should this extension of the range of view be the last we should permit ourselves? If we pronounce Nature careful of the planetary populations, though careless of the types of life which make up such populations, we are simply declining to take a further step in the course pointed out to us by the teachings of analogy.

Let us go over the ground afresh. Individual creatures, even the most favoured, perish after a time, though the balance may long oscillate between life and death. Weak at first, each creature which is to live grows at length to its full strength, not without vicissitudes which threaten its existence. As its life progresses the struggle continues. At one time the causes tending to decay seem to prevail awhile; at another, those which restore the vital powers. Disease is resisted again and again; at first easily, gradually with greater difficulty, until at length death wins the day. So it is with types or orders of living creatures. A favoured type peak at first, begins after awhile to thrive, and eventually attains its fullest development. But from time to time the type is threatened by dangers. Surrounding conditions become less favourable. It ceases to thrive, or, perhaps, passes through successive alternations of decay and restoration. At length the time comes when the struggle for existence can manifestly have but one end; and then, though the type may linger long before it actually disappears, its disappearance is only a question of time. Now, it is true that each type thus flourishing for awhile springs from other types which have disappeared. The favoured types of our age are but varieties of past types. Yet this does not show that types will continue to succeed each other in endless succession. For if we consider the matter rightly, we perceive that the analogue of this circumstance is, in the case of individual life, the succession of living creatures generation after generation. And as we know that each family, however large, dies out in the long run unless recruited from without, so we are to infer that the various types peopling this earth, since they cannot be recruited from without, must at length die out, though to our conceptions the time necessary for this process may appear infinite.

To the student of science who recognises the true meaning of the doctrine that force can be neither annihilated nor created, it will indeed appear manifest that life must eventually perish from the face of the earth; for he perceives that the earth possesses now a certain fund or store of force in her inherent heat, which is continually though slowly passing away. The sun also, which is a store-house whence certain forms of force are distributed to the earth, has only a finite amount of energy (though probably the inhabitants of earth are less directly concerned in this than in the finiteness of terrestrial forces). Life of all kinds on the earth depends on both these stores of force, and when either store is exhausted life must disappear from the earth. But each store is in its nature limited, and must one day therefore be exhausted.

We have also only to consider that life on the earth necessarily had a beginning, to infer that it must necessarily have an end. Clearest evidence shows how our earth was once "a fluid haze of light," and how for countless aeons afterwards her globe was instinct with fiery heat, amidst which no form of life could be conceived to exist, after the manner of life known to us, though the germs of life may have been present "in the midst of the fire." Then followed ages in which the earth's glowing crust was drenched by showers of muriatic, nitric, and sulphuric acid, not only intensely hot, but fiercely burning through their chemical activity. Only after periods infinite to our conceptions could life such as we know it, or even in the remotest degree like what is known to us, have begun to exist upon the earth.

The reader, doubtless, perceives whither these considerations tend, and how they bear in an especial manner on the opinion we are to form respecting the two planets Mars and Jupiter. We see our earth passing through a vast period, from its first existence as a separate member of the solar system, to the time when life appeared upon its surface; then began a comparatively short period, now in progress, during which the earth has been and will be the abode of life; and after that must follow a period infinite to our conceptions when the cold and inert globe of the earth will circle as lifelessly round the sun as the moon now does. We may, if we please, infer this from analogy, seeing that the duration of life is always infinitely small by comparison with the duration of the region where life appears; so that, by analogy, the duration of life on the earth would be infinitely short compared with the duration of the earth itself. But we are brought to the same conclusion independently of analogy, perceiving that the fire of the earth's youth, and the deathly cold of her old age must alike be infinite in duration compared with her period of vital life-preserving warmth. And what is true of the earth is true of every member of the solar system, major planet, minor planet, asteroid, or satellite; probably of every orb in space, from the minutest meteorite to suns exceeding our sun a thousandfold in volume.

Now, if we had any reason to suppose that all the planets sprang simultaneously into being, that each stage of each planet's existence synchronized with the same stage for every other planet, and that life appeared and disappeared at corresponding stages in the existence of every planet, we should perforce accept the theory that at this moment every planet is the abode of life. Not only, however, have we no reason to suppose that any one of these conditions exists (and not one but all these conditions must exist before that theory can be accepted), but we have the strongest possible evidence, short of actual demonstration, that the births of the different planets occurred at widely remote periods, and that the several stages of the different planets' growth differed enormously in duration; while analogy, the only available evidence on the third point, assures us that little resemblance can be supposed to exist between the conditions and requirements of life in different members of the solar system.

On any reasonable hypothesis of the evolution of the solar system, the eight primary planets must have begun to exist as independent bodies at very different periods. If we adopt Laplace's theory of the gradual contraction of a mighty nebula, then we should infer that the planets were formed in the order of their distances from the sun, the remoter planets being those formed first. And according to the conditions of Laplace's hypothesis, the interval separating the formation of one planet from that of its next neighbour on either side must have been of enormous duration. If we prefer the theory of the gradual growth of each planet by processes of accretion, we should infer perhaps that the larger planets took longest in growing to maturity, or preferably that (according to the doctrine of probabilities) a process which for the whole system must have been of inconceivably enormous length, and in which the formation of one planet was in no sort connected with the formation of any other, could not have resulted in bringing any two planets to maturity at the same or nearly the same time, save by so improbable a combination of fortuitous circumstances as may justly be considered impossible. If we consider that the solar system was evolved by a combination of both processes (the most probable theory of the three in our opinion), we must still conclude that the epochs of the formation of the different planets were separated by time intervals so enormous that the duration of life upon our earth is, by comparison, as a mere second compared with a thousand years.

Again, if we compare any two members of the solar system, except perhaps Venus and the earth, we cannot doubt that the duration of any given stage of the existence of one must be very different from that of the corresponding stage in the other. If we compare, for instance, Mars with the Earth, or the Earth with Jupiter, and still more, if we compare Mars with Jupiter, we cannot doubt that the smaller orb of each pair must pass much more rapidly through the different stages of its existence than the larger. The laws of physics assure us of this, apart from all evidence afforded by actual observation; but the results of observation confirm the theoretical conclusions deduced from physical laws. We cannot, indeed, study Mars in such sort as to ascertain his actual physical condition. We know that his surface is divided into lands and seas, and that he possesses an atmosphere; we know that the vapour of water is at times present in this atmosphere; we can see that snows gather over his polar regions in winter and diminish in summer; but we cannot certainly determine whether his oceans are like our own, or for the most part, frozen; the whitish light which spreads at times over land or sea may be due to clouds or to light snow-falls, for aught that observation shows us; the atmosphere may be as dense as our own, or exceedingly rare; the polar regions of the planet may resemble the earth's polar regions, or may be whitened by snows relatively quite insignificant in quantity. In fine, so far as observation extends, the physical condition of Mars may closely resemble that of the earth, or be utterly dissimilar. But we have indirect observational means of determining the probable condition of a planet smaller than the earth, and presumably older—that is, at a later stage of its existence. For the moon is such a planet, and the telescope shows us that the moon in her decrepitude is oceanless, and is either wholly without atmosphere or possesses an atmosphere of exceeding tenuity. Hence we infer that Mars, which, as an exterior planet and much smaller than the earth, is probably at a far later stage of its existence, has passed far on his way towards the same state of decrepitude as the moon. As to Jupiter, though he is so much farther from us than Mars, we have direct observational evidence, because of the vast scale on which all the processes in progress on his mighty globe are taking place. We see that his whole surface is enwrapped in cloud layers of enormous depth, and undergoing changes which imply an intense activity (or, in other words, an intense heat) throughout the whole mass of Jupiter. We recognise in the planet's appearance the signs of as near an approach to the condition of the earth, when as yet the greater part of her mass was vaporous, as is consistent with the vast difference necessarily existing between two orbs containing such unequal quantities of matter.

Mars, on the one hand, differs from the earth in being a far older planet—probably, as respects the actual time which has elapsed since the planet was formed, and certainly, as respects the stage of its career which it has now reached. Jupiter, on the other hand, differs from the earth in being a far younger planet, not in years perhaps, but in condition. As to the actual age of Jupiter we cannot form so probable an opinion as in the case of Mars. Mars being an exterior planet, must have begun to be formed long before the earth, and, being a much smaller planet, was probably a shorter time in attaining his mature growth; on both accounts, therefore, he would be much older than the earth in years; while, as we have seen, his relative smallness would cause the successive stages of his career subsequent to his existence as an independent and mature planet to be much shorter. Jupiter, being exterior to Mars, presumably began to be formed millions of centuries before that planet, but his bulk and mass so enormously exceed those of Mars that his growth must have required a far longer time; so that it is not at all certain that even in point of years Jupiter (dating from his maturity) may not be the youngest member of the solar system. But even if not, it is practically certain that, as regards development, Jupiter is far younger than any member of the solar system, save perhaps his brother giant Saturn, whose greater antiquity and inferior mass (both suggesting a later stage of development) may have been counterbalanced by a comparative sluggishness of growth in the outer parts of the solar domain.

It is manifest from observed facts, in the case of Jupiter, that he is as yet far removed from the life-bearing stage of planetary existence, and theoretical considerations point to the same conclusion. In the case of Mars, theoretical considerations render it extremely probable that he has long since passed the life-bearing stage; and observed facts, though they do not afford strong evidence in favour of this conclusion, suggest nothing which, rightly considered, is opposed to it. It is true that, as we have shown in former essays on this planet, Mars presents many features of resemblance to our earth. The planet rotates in a period not differing much from our day; his year does not exceed ours so greatly as to suggest relations unpleasantly affecting living creatures; it has been shown that there are oceans in Mars, though it is not quite so clear that they are not for the most part frozen; he has an atmosphere, and the vapour of water is at times present in that atmosphere as in ours; clouds form there; snow falls, and perhaps rain from time to time; ice and snow gather at the poles in winter, and are partially melted in summer; the land surface must necessarily be uneven, seeing that the very existence of continents and oceans implies that once, at any rate, the globe of Mars was subjected to forces resembling those which have produced the irregularities of the earth's surface; glacial action must still be going on there, even if there is no rainfall, and therefore no denuding action corresponding to that which results from the fall of rain on our terrestrial continents. But it is a mistake (and a mistake too commonly made) to suppose that the continuance of those natural processes which are advantageous to living creatures, implies the existence of such creatures. The assumption is that the beneficent processes of nature are never wasted according to our conceptions. Yet we see over and over again in nature not merely what resembles waste, what in fact *is* waste according to our ideas, but an enormous excess of wasted over utilized processes. The sun pours forth on all sides the supplies of light and heat which, where received as on our earth, sustain vegetable and animal life; but the portion received by our earth is less than the 2000 millionth, the portion received by all the planets less than the 230 millionth part, of the total force thus continually expended. And this is typical of nature's operations everywhere. The earth on which we live illustrates the truth as clearly as the sun. We are apt to say that it teems with life, forgetting that the region occupied by living creatures of all orders is a mere shell, while the whole interior mass of the earth, far larger in volume, and undergoing far more active processes of change—teeming, in fact, with energy—contains no living creature, or at least can only be supposed to contain living creatures by imagining conditions of life utterly different from those we are familiar with.

The mere continuance therefore on Mars of processes which on the earth we associate with the existence of life, in reality proves nothing as to the continued existence of life on Mars. The surface of the moon, for example, must undergo disturbances—mighty throes, as the great wave of sun-distributed heat-circles round her orb once in each lunation—yet few suppose that there is life, or has been for untold ages, on the once teeming surface of our companion planet. The formation of Mars as a planet must so long have preceded that of our earth, his original heat must have been so much less, his small globe must have parted with such heat as it once had so much more rapidly, Mars lies so much farther from the sun than our earth does, his atmosphere is so much rarer, his supply of water (the temperature-conserving element) is relatively as well as absolutely so much smaller, that his surface must be utterly unfit to support life in the remotest degree resembling the forms of life known on earth (save, of course, those lower forms which from the outset we have left out of consideration). Yet at one time, a period infinitely remote according to our conceptions of time, the globe of Mars must have resembled our earth's in warmth, and in being disturbed by the internal forces which cause that continual remodelling of a planet's surface without which life must soon pass away. Again, in that remote period the sun himself was appreciably younger; for we must remember that although, measured by ordinary time-intervals, the sun seems to give forth an unvarying supply of heat day by day, a real process of exhaustion is in progress there also. At one time there must have existed on Mars as near an approach to the present condition of our earth, or rather to her general condition during this life-supporting era of her existence, as is consistent with the difference in the surface gravity of the planets, and with other differences inherent as it were in their nature. Since Mars must also have passed through the fiery stage of planetary life and through that intermediate period when, as it would seem, life springs spontaneously into being under the operation of natural laws not as yet understood by us, we cannot doubt that when his globe was thus fit for the support of life, life existed upon it. Thus for a season—enormously long compared with our ordinary time measures, but very short compared with the life-supporting era of our earth's career—Mars was a world like our own, filled with the various forms of life. Doubtless, these forms changed as the conditions around them changed, advancing or retrograding as the conditions were favourable or the reverse, perhaps developing into forms corresponding to the various races of men in the possession of reasoning powers, but possibly only attaining to the lower attributes of consciousness when the development of life on Mars was at its highest, thenceforth passing by slow degrees into lower types as the old age of Mars approached, and finally perishing as cold and death seized the planet for their prey.

In the case of Jupiter, we are guided by observed facts to the conclusion that ages must elapse before life can be possible. Theory only tells us that this mighty planet, exceeding the earth three hundred times the mass, and containing five-sevenths of the mass of the whole system of bodies travelling around the sun, must still retain a large proportion of its original heat, even if we suppose its giant orb took no longer in fashioning than the small globe of our earth. Theory tells us, moreover, that so vast a globe could not possibly have so small a density (less than one-fourth the earth's) under the mighty compressing force of its own gravity, unless some still more potent cause were at work to resist that tremendous compression—and this force can be looked for nowhere but in the intense heat of the planet's whole mass. But observation shows us also that Jupiter is thus heated. For we see that the planet is surrounded by great cloud belts such as our own sun would be incompetent to raise,—far more so the small sun which would be seen in the skies of Jupiter if already a firmament had been set "in the midst of the waters." We see that these belts undergo marvellous changes of shape and colour, implying the action of exceedingly energetic forces. We know from observations that the region in which the cloud-bands form is exceedingly deep, even if the innermost region to which the telescope penetrates is the true surface of the planet—while there is reason for doubting whether there may not be cloud-layer within cloud-layer, to a depth of many thousand miles,—or even whether the planet has any real surface at all. And, knowing from the study of the earth's crust that for long ages the whole mass of our globe was in a state of fiery heat, while a yet longer period preceded this when the earth's globe was vaporous, we infer from analogy that Jupiter is passing, though far more slowly, through stages of his existence corresponding with terrestrial eras long anterior to the appearance of life upon the scene.

We must, then, in the case of Jupiter, look to a far distant future for the period of the planet's existence as a life-sustainer. The intense heat of the planet must in the course of time be gradually radiated away into space, until at length the time will come when life will be possible. Then, doubtless, will follow a period (far longer than the life-sustaining portion of the earth's existence) during which Jupiter will in his turn be the abode of life. It may be that long before then the sun will have lost so large a proportion of his heat that life on Jupiter will be mainly sustained by the planet's inherent heat. But more probably the changes in the sun's heat take place far more slowly relatively than changes in the condition of any planet, even the largest. Possibly, even, the epoch when Jupiter will have so far cooled as to be a fit abode for life will be so remote that the sun's fires will have been recruited by the indrawing of the inferior family of planets, including our own earth. For it must be remembered that the periods we have to deal with in considering the cooling of such an orb as Jupiter are so enormous, that not merely the ordinary time-measures, but even the vast periods dealt with by geologists must be insignificant by comparison. Yonder is Jupiter still enwrapped in clouds of vapour raised by his internal heat, still seething, as it were, in his primeval fires, though the earth has passed through all the first stages of her existence, and has even long since passed the time of her maturity as a life-sustaining globe. It is no mere fancy to say that all the eras of Jupiter's existence must be far longer than the corresponding terrestrial eras, since we actually see Jupiter in that early stage of his existence, and know that the earth has passed through many stages towards the final eras of decay and death. It is indeed impossible to form any opinion as to the probable condition of the sun or of the solar system when Jupiter shall become fit to support life, seeing that, for aught we know, far higher cycles than those measured by the planetary motions may have passed ere that time arrives. The sun may not be a solitary star, but a member of a star system, and before Jupiter has cooled down to the life-sustaining condition, the sun's relation to other suns of his own system may have altered materially, although no perceptible changes have occurred during the relatively minute period (a trifle of four thousand years or so) since astronomy began.

And as, in considering the case of Mars, we suggested the possibility that owing to the relative shortness of that planet's life-sustaining era, the development of the higher forms of life may have been less complete than on our earth thus far (still less than the development of those forms on the earth in coming ages), so we may well believe that during the long period of Jupiter's existence as a life-supporting planet, creatures far higher in the scale of being than any that have inhabited, or may hereafter inhabit, the earth, will be brought into existence. As the rule of nature on earth has been to advance from simple to more complex forms, from lower types to higher, so (following the argument from analogy) we must suppose the law of nature to be elsewhere. And time being a necessary element in any process of natural development, it follows that where nature is allowed a longer time to operate, higher forms, nobler types, will be developed. If this be so, then, in Jupiter, the prince of planets, higher forms of animated consciousness being will doubtless be developed than in any other planet. We need not indeed point out that the supposition on which this conclusion rests is merely speculative, and that now, when the laws of natural development have so recently begun to be recognised, and are still so imperfectly known, the argument from analogy is (in this particular case) necessarily weak. Nevertheless, analogy points in the direction we have indicated, and it is well to look outwards and onwards in that direction, even though the objects within the field of view are too remote for us to perceive their real forms.

But, limiting our conclusions to those which may be justly inferred from known facts, let us inquire how the subject of life in other worlds presents itself when dealt with according to the relations above considered.

It is manifest at once that whether our new ideas respecting the present condition of Mars or Jupiter be correct or not, the general argument deducible from the analogy of our own earth remains unaffected. If Mars and Jupiter be at this moment inhabited by living creatures, it can only be because these orbs happen to be passing through the life-supporting period of their existence. We have shown that there is strong reason for believing this not to be the case; but if it is the case, this can only be regarded as a strange chance. For we have learned from the study of our earth, that the life-supporting era of a planet is short compared with the duration of the planet's existence. It follows that any time selected at random in the history of a planet is far more likely to belong to one or other of the two 'lifeless eras, one preceding, the other following the life-supporting era, than to belong to this short era itself. And this present time is time selected at random with reference to any other orb in the universe then our own earth. We are so apt to measure all the operations of nature by our own conceptions of them, as well in space as in time, that as the solar system presents itself (even now) as the centre of the universe, so this present time, the era of our own life, or of our nation's life, or of the life of man, or of the existence of organic beings on the earth, or, passing yet a grade higher, the era of our earth's existence as a planet, presents itself to us as the central era of all time. But what has been shown to be false with respect to space is equally false with respect to time. Men of old thought that the petty region in which they lived was the central spot of all the earth, and the earth the centre of the universe. After this was shown to be false by Copernicus, Kepler, and Newton, men clung in turn to the conception that the solar system is central within the universe. The elder Herschel showed that this conception also is false. Even he, however, assigned to the sun a position whence the galaxy might be measured. But it begins to be recognised that this not so. Nay, not only is the sun no suitable centre whence to measure the stellar system, but the stellar system is for us immeasurable. The galaxy has no centre and no limits; or rather we may say of it what Blaise Pascal said of the universe of space—its centre is everywhere and its circumference nowhere. The whole progress of modern science tends to show that we must similarly extend our estimate of time. In former ages each generation was apt to regard its own era as critical in the earth's history, that is, according to their ideas, in the history of the universe itself. Gradually men perceived that no generation of men, no nation, no group of nations, occupies a critical or central position in the history of even the human race upon earth, far less in the history of organic life. We may now pass a step higher, and, contemplating the infinity of time, admit that the whole duration of this earth's existence is but as a single pulsation in the mighty life of the universe. Nay, the duration of the solar system is scarcely more. Countless other such systems have passed through all their stages, and have died out untold ages before the sun and his family began to be formed out of their mighty nebula; countless others will come into being after the life has departed from our system. Nor need we stop at solar systems, since within the infinite universe, without beginning and without end, not suns only, but systems of suns, galaxies of such systems, to higher and higher orders endlessly, have long since passed through all the stages of their existence as systems, or have all those stages yet to pass through. In the presence of time-intervals thus seen to be at once infinitely great and infinitely little—infinitely great compared with the duration of our earth, infinitely little by comparison with the eternities amidst which they are lost—what reason can we have for viewing any orb in space from our little earth, and saying now is the time when that orb is, like our earth, the abode of life? Why should life on that orb synchronise with life on the earth? Are not, on the contrary, the chances infinitely great against such a coincidence? If, as Helmholtz has well said, the duration of life on our earth is but the minutest "ripple in the infinite ocean of time," and the duration of life on any other planet of like minuteness, what reason can we have for supposing that those remote, minute, and no way associated waves of life must needs be abreast of each other on the infinite ocean whose surface they scarcely ripple?

But let us consider the consequences to which we are thus led. Apart from theoretical considerations or observed facts, it is antecedently improbable that any planet selected at random, whether planet of our own system or planet attending on another sun than ours, is at this present time the abode of life. The degree of improbability corresponds to the proportion between the duration of life on a planet, and the duration of the planet's independent existence. We may compare this proportion to that existing between the average lifetime of a man and the duration of the human race. If one person were to select at random the period of a man's life, whether in historic, prehistoric, or future time, and another were to select an epoch equally at random, save only that it fell somewhere within the period of the duration of the human race, we know how exceedingly minute would be the probability that the epoch selected by the second person would fall within the period selected by the first. Correspondingly minute is the *a priori* probability that at this present epoch any planet selected at random is the abode of life. This is not a mere speculation, but an absolute certainty, if we admit as certain the fact, which scarcely any man of science now questions, that the period during which organic existence is possible on any planet is altogether minute compared with that planet's existence.

The same relation is probably true when we pass to higher systems. Regarding the suns we call "the stars" as members of a sidereal system of unknown extent (but one of innumerable systems of the same order), the chance that any sun selected at random is, like our own sun at the present time, attended by a planetary system, in one member of which at least life exists, is exceedingly small, if, as is probable, the life-supporting era of a solar system's existence is very short compared with the independent existence of the system. If the disproportion is of the same order as in the case of a single planet, the probability is of the same order of minuteness. In other words, if we select any star at random, it is as unlikely that the system attending on that sun is at present in the life-bearing stage as a system as it is that any planet selected at random is at present in the life-bearing stage as a planet. This conclusion, indeed, may be regarded as scarcely less certain than the former, seeing that men of science as little doubt the relative vastness of the periods of our sun's history, antecedent to and following his present form of existence as a supporter of life, as they doubt the relative vastness of the periods preceding and following the life-supporting era of any given planet. There is, however, just the element of doubt in the case of the star, that the very fact of the star's existence as a steady source of light and heat implies that the star is in a stage in some degree resembling that through which our own sun is now passing. It may be, for instance, that the prior stages of solar life are indicated by some degree of nebulosity, and the later stages by irregular variations, or by such rapid dying out in brightness as has been observed in many stars. Yet a sun must be very nebulous indeed—that is must be at a very early stage in its history—for astronomers to be able to detect its nebulosity; and again, a sun may long have ceased to be a life-supporter, before any signs of decadence measurable at our remote station, and with our insignificant available time-intervals for comparison, are manifested.

As to higher orders than systems of suns we cannot speculate, because we have no means of determining the nature of such orders. For instance, the arrangement and motions of the only system of suns we know of, the galaxy, are utterly unlike the arrangement and motions of the only system of planets we know of. Quite possibly systems of sun-systems are unlike either galaxies or solar systems in arrangement and motions. But if, by some wonderful extension of our perceptive powers, we could recognise the countless millions of systems of galaxies doubtless existing in infinite space, without however being able to ascertain whether the stage through which any one of those systems was passing corresponded to the stage through which our galaxy is at present passing, the probability of life existing anywhere within the limits of a galaxy so selected at random would be of the same order as the probability that life exists either in a planet taken at random, or in a solar system taken at random. For though the number of suns is enormously increased, and still more the number of subordinate orbs like planets (*in posse* or *in esse*), the magnitude of the time-intervals concerned is correspondingly increased. One chance out of a thousand is as good as a thousand chances out of a million, or as a million out of a thousand millions. Whether we turn our thoughts to planet, sun, or galaxy, the law of nature (recognised as universal within the domain as yet examined), that the duration of life in the individual is indefinitely short compared with the duration of the type to which the individual belongs, assures us, or at least renders it highly probable, that in any member of any of these orders taken at random, it is more probable that life is wanting than that life exists at this present time. Nevertheless it is at least as probable that every member of every order—planet, sun, galaxy, systems of galaxy, and so onwards to higher and higher orders endlessly, has been, is

SHIPPING.

ARRIVALS.—SEPTEMBER 4.

Mary Campbell, schooner, 144 tons, Captain Williams, from Clarence River 31st ultimo. H. Clarke, agent.

Whampoa (s.), 3500 tons, Captain Hynes, from Plymouth via Melbourne 2nd instant. Passengers from Plymouth—Lieutenant-Colonel F. R. Pratt, R.E.; Captain Stewart, R.E., Lieutenant Lake, R.E.; Dr. Carew, army medical department; Sub-lieutenant Rees, R.N.; Mr. Beckett, Rev. Allan Macdougall, Mr. and Mrs. W. A. Allen and five (2), Mr. and Mrs. J. S. Donovan, Messrs. H. C. Adams, W. P. C. Kennedy, G. D. Greenwood, W. A. T. Sinclair, W. M. Lyall, Peter C. M. Vetch, B. E. Reysart, Charles E. Everett, C. Hardy, R. B. Marcari; 13 second cabin, and 42 steerage; also 21 rank and file, 2 non-commissioned officers and men of the Royal Engineers. From Melbourne: Rev. Mr. Langhan, Mrs. Langhorn, Rev. W. Howell, Rev. Mr. Boyless, Rev. J. Armstrong, Rev. Mr. Loft, Mr. Watson, Mr. G. M. Bell. J. Fraser and 60 in transit.

Julia Percy (s.), 200 tons, Captain Sheed, from Merimbula 3rd inst. Passengers—Miss Roberts, Miss Luckie, Messrs. H. Lee, G. M. Stiles, W. B. Cooke, Deverale, Hall, R. English, W. English, Brown, Person, and 4 in the steerage. A. S. N. Co., agents.

Lily, schooner, 76 tons, Captain Nicholson, from Twofold Bay 3rd inst. Captain, agent.

Severn, England (s.), 300 tons, Captain Quayle, from Grafton 2nd inst. Passengers—Mr. W. Clear, and 17 in the steerage. Clarke, Fell, & E. Co., agents.

Fly, brig, barque, 398 tons, Captain Bond, from Adelaide 22nd ultimo. Captain, agent.

Lindsay (s.), 1600 tons, Captain Kennedy, from Newcastle. Ford, Adamson, and Co., agents.

Alexandra (s.), 425 tons, Captain W. J. Stuart, from Maryborough, via Brisbane, 2nd instant. Passengers—Mrs. Hutchinson, 4 for G. Sandyman, Messrs G. J. Stewart, A. M'Lean, J. Rose, J. Gepp, Moore, Bolitho, L. Samson, and 14 in the steerage. A. S. N. Company, agents.

DEPARTURES.—SEPTEMBER 4.

Thomas Beal, for Manilla.
W. Wakley, for Adelaide.
Wentworth (s.), for Melbourne.
Hentaw, for Shanghai.

SEPTEMBER 5.

Good Hunter, for Melbourne.

PROBJECTED DEPARTURES.—SEPTEMBER 6.

Derwent (s.), for Singapore, via Queensland ports.

CLEARANCE.—SEPTEMBER 4.

Wentworth (s.), 866 tons, Captain Paddle, for Melbourne. Passengers—Mrs. Carey and 7 children, Mrs. Robins, Mrs. Small, Miss J. B. Newsham, Mrs. Lake, Mrs. Gibbs, Mrs. G. C. Clarke and child, Rev. W. Floyd, Rev. Mr. Carey, Messrs. Solomon, R. J. Long, G. E. Labertouche, H. Y. Norton, A. Lewers, R. T. Hartnell, J. E. Newsham, H. Stone, P. Brown, Brookes, J. Robyns, Gotting, J. Davis, J. H. Heaton, and 27 in the steerage.

COASTERS INWARDS.—SEPTEMBER 4.

Dorothy (s.), from Newcastle, with 16 bales hay, 10 bundles skins, 2 casks tallow, 4 packages horns, 19 pigs; Eagle (s.), from Wollongong, with 220 tons coal; Maid of Australia, from the Hunter River, with 600 bushels maize, 8 cases eggs; Wonioora (s.), from Bulli, with 200 tons coal; Ann, from Brisbane Water, with 94 logs, 28,000 laths, 2500 palings; Maitland (s.), from the Hunter River, with 21 bales wool, 6 bales skins, 15 bags bone dust, 52 bags oysters, 24 cases eggs, 13 bags oats, 1 bag bacon, 2 bundles leather, 2 cases wine, 18 hides, 3 quarter-casks tallow, 8 cases grocery, 125 sheep, 93 pigs, and sundries; Morpeth (s.), from the Hunter River, with 6 bales wool, 34 bales hay, 2 bales skins, 2 cases eggs, 20 boxes soap, 196 sheep, 1 horse, and sundries.

COASTERS OUTWARDS.—SEPTEMBER 4.

Wonoona (s.), for Bulli; Eagle (s.), for Newcastle; Ann, for Twofold Bay.

IMPORTS.—SEPTEMBER 4.

[A special charge is made for consignees' announcements inserted in this column.]

Kangaroo and Ida F. Taylor: 300 sacks Adelaide wheat—John Hughes and Son.

Ida F. Taylor and Ida F. Taylor: 3000 bags wheat; 320 bags bran; 979 bags potatoes; 2000 bags Rowett and Thorpe's flour—Henry Clarke.

Julia Percy Campbell: 182 tons Circular Head potatoes—Henry Clarke.

EXPORTS.—SEPTEMBER 4.

City of Brisbane (s.), for Brisbane: 18 packages tobacco, 162 cases phosphates, 120 packages hardware, 26 grindstones, 3 cases whips, 6 cases stitches, 100 packages fibre, 18 cases acids, 7 casks paints, 1 buggy, 8 bundles rattans, 20 packages soda, 11 packages coalage, 1 box books, 10 bags flour, 8 boxes type, 271 cases fruit, 24 kegs butter, 1 case boots, 19 bags onions, 6 horses, 248 packages sundries.

Helvetia (s.), for Rockhampton: 60 casks beer, 46 cases spirits, 200 cases brandy, 1 box opium, 376 bags salt, 653 packages sundries, 3 cases sarsaparilla, 16 bags onions, 28 bags guano, 74 packages horsegear, 24 cases wine, 8 cases boots, 164 cases fruit, 65 packages oil, 180 packages.

SHIPS' MAILS.

Mails will close at the General Post Office as follows:—

For Hunter River.—By the Diamantina (s.), this day, at 4 p.m.

For Indian, China, India, United Kingdom, and Continent of Europe.—By the E. and A. M. S. Bowen, this day, at 4 p.m.

For New York.—By the Heath, this day, at 3 p.m.

For Brisbane Water.—By the Pelican (s.), this day, at 5.30 p.m.

For Merimbula and Eden.—By the John Penn (s.), on Tuesday, at 6.15 a.m.

For Melbourne.—By the Barrabool (s.), on Tuesday, at 11 a.m.

For Illawarra.—By the Governor Blackall (s.), on Tuesday, at 6 p.m.

For Grafton.—By the Agnes Irving (s.), on Tuesday, at 4 p.m.

Custom House.—Entered Outwards, September 4: Barrabool (s.), 868 tons, Captain Pain, for Melbourne; Governor Blackall (s.), 303 tons, Captain Saunders, for Illawarra.

The three-masted schooner Smiling Morn, now discharging at the Circular Quay, is a remarkably smart-looking craft. She is essentially from London to Hobart Town, and, we understand, will be put off, or for sale.

The Alexandra (s.) left Brisbane at 9.30 a.m. on Thursday, the 2nd instant, rounded Cape Moreton at 2.30 p.m., passed Point Danger at 8.40 p.m. same date; Smoky Cape at 1.15 p.m. of the 3rd, and Rock Point at 11.30 p.m. the same day, arriving on the 4th instant. Experienced moderate S.W. winds and heavy southerly swell to Smoky Cape; from thence heavy S.W. gale and heavy sea, signalled the brig Gem, of Newcastle, from Adelaide, at 1.15 p.m. of the 3rd, fifteen miles south of Smoky Cape, bound north.

The Whampoa (s.), now on her second voyage from London, arrived via Melbourne on Saturday morning, completing her passage from Plymouth in 34 days, having taken her departure from the latter port on 12th July. On this voyage she did not touch at any intermediate port, but steamed direct to Port Phillip, where she arrived on the 28th ultimo, the log giving the distance run as 11,992 miles; an average of 10½ knots per hour; consumption of coals, 56 tons per day. The best runs made were 302 and 321 miles. The Whampoa sailed from Port Phillip Heads at 8 a.m. on the 2nd instant, and has made the run in 48 hours, the breezes prevailing to Cape Howe; from thence heavy gales from S.W., with a high confused sea, and the vessel, very deep, being out of trim, made very heavily, the latter part proving, as far as the weather was concerned, the most disagreeable of the voyage. There has been a complete change of officers, since the Whampoa was in this port before; and a very marked and most agreeable result has ensued. The vessel is in excellent order, and strict discipline prevails throughout the various departments; and Captain Hynes and his officers have been complimented by the passengers for the kindness and attention received. We are indebted to Mr. Hodgkinson, the purser, for papers to the 12th July, on which date the ship left Plymouth.

The barque Ellen (s.), Captain Kennedy, arrived yesterday from New Zealand, via Newcastle, and was berthed at the Cosmopolitan Wharf, where she will take in her return passengers and freight. On her passage from New Zealand she had to contend against very bad weather, the full particulars of which have already appeared. The very excellent accomodation the vessel affords is fully appreciated by passengers bound to the southern ports of New Zealand.

The cargo of the Ellen, schooner, from Twofold Bay, consists of 19 casks whale oil, 3 bales sheepskins, 9 hides, 11 bags bacon, 27 bags potatoes, 1 cask lard, 3 tubs butter, and sundries.

The John Penn (s.) crossed Merimbula bar at 10.30 a.m. on the 2nd, rounded at Eden, Tathra, and Wollongong, and arrived in Sydney at noon on the 4th. Experienced a strong southerly gale to Cape St. George; thence to Sydney fresh southerly wind, with fine weather. Cargo: 176 cases maizena, 17 bags bran, 5 casks tallow, 60 bags butter, 2 bales leather, 2 bales skins, 20 bags bark, 40 bags bacon, 100 cheeses, and sundries.

The New England (s.) left Grafton at 6 a.m. September 2nd, crossed the bar at 8 a.m. on the 3rd, passed Smoky Cape at 6 p.m., and arrived in Sydney at 10.30 p.m. on the 5th. Experienced light westerly winds to Crowdy Head, from thence to Port Stephens strong S.S.W. gale, with a heavy sea. Her cargo consists of 611 bags maize, 491 bags tin ore, 771 cases meat, 19 hogsheads tallow, 100 bags bones, 30 hides, 1 bale hot leather, 1 case opera glasses, 4 coops fowls. She anchored in Port Stephens at noon on the 4th, and left at noon yesterday. From Port Stephens to Sydney, light northerly winds with heavy S.E. swell. Ketch Gem, from Eden and Thistle, Fancy Jack, Adelong, and Victory to wind-bound in Nelson Bay.

Notice to Mariners: New Lights, Sugar Loaf Point.—It is hereby notified that, on and after the night of Wednesday, the 1st of September next, a first order revolving bright light, flashing every half minute, will be exhibited from Sugar Loaf Point, in the vicinity of the Seal Rocks. This light will be elevated 238 feet above high-water mark, and it will be visible from a ship's deck in clear weather at a distance of 23 miles. In addition to and below the revolving light, a fixed green light of the fourth order, will be shown from the same tower, for the purpose of warning ships from the Seal Rocks and adjacent dangers. Further particulars will be published hereafter.—Francis Hixson, President.

NEWCASTLE.

ARRIVALS.

September 3.—Narramissic, barque, Bell, from Melbourne.
September 3.—Moonta, ship, Snadden, from Wallaroo, with copper ore.
September 3.—Camille, barque, Roberts, from Dunedin.
September 3.—San Juan, brig, Dawson, from Melbourne.
September 3.—Lady Darling (s.), Saul, from Melbourne.
September 3.—Fanny, schooner, Lulham, from Melbourne.
September 4.—Barmbool, (s.), 585, Pain, from Sydney.
September 4.—Planter, barque, 993, Storey, from Wallaroo, with copper ore.

DEPARTURES.

September 3.—Sparrowhawk, barque, Garrioch, for Melbourne, with 550 tons coal.
September 3.—Persian, barque, M'Williams, for Melbourne, with 550 tons coal.
September 3.—Adelphoi, barque, Gregory, for Lyttelton, with 557 tons coal.
September 3.—Lucanyde, barque, Kingcome, for Adelaide, with coal.
September 3.—Sea Nymph, barque, Tara, for Melbourne, with 376 tons coal.
September 3.—Jessie Victor, barque, James, for Melbourne, with 470 tons coal.
September 3.—Foster, Kennedy, for Dunedin, via Sydney, with 1500 tons coal, in shooks.

ARRIVALS INWARDS.

September 3.—Brilliant, Scott, from Newcastle.

Freights.—There is no improvement in our freight market to report. Engagements for foreign and intercolonial ports have been on a very limited scale, and in the absence of orders the rates of freight remain nominal at last quotations. The bulk of the large vessels now in port are bound for San Francisco, under home charter on ship's account. For Hongkong, Seven vessels have sailed, with 5474 tons; there are three on the berth, all loading home charter; these are estimated to carry about 3300 tons. For Singapore there are no departures. The barque Lady Hinks, chartered in May last at 27s. 6d., is the only vessel to load; she will carry about 1050 tons. For Java ports four vessels have sailed with cargoes aggregating 2518 tons. The tonnage now on the berth will take about 2200 tons; the ship Andrew Reid, 700 tons register, was chartered a few days ago for Batavia, at 17s. For San Francisco six vessels have sailed with 10,547 tons coal; those now here engaged to load are estimated to take about 13,000 tons. For Manila: The departures from this port are the Lord of the Isles and Francis B. Fay, with 2036 tons; the barque Formosa and the Matilda are here to load under charter, the former at 20s. and the latter at 18s. Freights: Foreign—Hongkong, 20s.; Saigon, 18s.; Batavia, 17s.; Galle, 15s.; Manila, 18s.; Bombay, 20s.; San Francisco, 20s.; Yokohama and Shanghai, nominal. Intercolonial: Dunedin, 20s.; Nelson, 18s.; other New Zealand ports, nominal. Melbourne—Wharf, 14s 6d.; bay, 13s. 6d. Adelaide, 12s. *Newcastle Pilot*, September 4.

MELBOURNE.

ARRIVALS.

August 31.—Egmont (s.), from Sydney; Star Queen, from London; Haddington, from Liverpool; Ann, Catherine Jane, from Newcastle; Emma Jane, from the Richmond.

DEPARTURE.

August 31.—Lupata, for Taleamhe.

[By Electric Telegraph.]

MELBOURNE.

ARRIVALS.

September 3.—City of Adelaide (s.), Macedon (s.), from Sydney; Britton, from Newcastle; Southern Cross (s.), from Hobart Town; Grecian, from London.
September 4.—Moses B. Tower, from Batavia.

DEPARTURE.

September 3.—Dandenong (s.), for Sydney.

GRAFTON.

DEPARTURE.

September 4.—Agnes Irving (s.), for Sydney.

G. EUG. SIMON.

Sydney, 4th September, 1875.

The Sydney Morning Herald.

MONDAY, SEPTEMBER 6, 1875.

SOME years ago, when a correspondence was being carried on between the SECRETARY OF STATE and the Governments of the Australian colonies upon the subject of intercolonial tariff relations, there was one circular despatch in a particular degree deserving of attention. In that very able State paper, the SECRETARY FOR THE COLONIES examined in its various bearings, with great fullness and care the claim of the colonial Governments to the power to make special tariff arrangements with each other irrespective of the duties levied upon imports from colonies or countries outside. Amongst other arguments which he used upon the occasion was this, namely, that whilst the policy of England was a free-trade policy, the inevitable tendency of the policy advocated by the colonies would be in the direction of protection. The colonies, as we know, persisted in their demands. Perhaps it would be more correct to say that though the opinion of the colonies was not taken upon the question, the delegates from the respective Governments in conference pressed the claim with urgency. The Imperial Government yielded, and the extended powers were given. And now we find Mr. BERRY, the leader of the protectionist party in Victoria, suggesting an intercolonial conference for the establishment of intercolonial free trade upon the basis of protection as against the world outside. This is what he said upon the question in his recent speech to his constituents:—

"To pass now to another subject, I think the Border duties are a matter which this Government ought to take in hand—at all events ought to correspond with the Government of New South Wales to see if something cannot be done to remove the undesirable obstructions upon the borders between the two colonies. I may go further, and say that it will be the duty of this Government to address all the neighbouring colonies to see whether representatives of the different Governments cannot meet in, for instance, Tasmania or Melbourne, with the object of treating this question of tariff in a reasonable, national, and Australasian spirit. I have such confidence in the wisdom and the value of a protective system for Australasia, as it has proved to be so advantageous for the United States of America, that I do not despair, if I meet statesmen from the other colonies, of convincing them that their interests would be benefited, and also the interests of the people they rule over, if we could agree upon a tariff based upon a protective system, but which should be no needless hindrance to commerce, this protective tariff to be followed by intercolonial free trade among all these important colonies."

It has been the boast of Mr. ROBERTSON, when the subject of Border Customs and intercolonial relations

HOW TO TELL GOOD RUM.—The Etheridge correspondent of the *Brisbane Courier* says that a case was brought before the Police Magistrate at Normanton, which, if it did not create any particular amount of excitement, caused considerable amusement in Court. The case was this:—Charley Murphy, the licensee of the Royal Hotel, purchased a hogshead of rum "as per sample." The hogshead was delivered in due course, but the landlord, after tasting the spirit in bulk, pronounced it to be adulterated, and laid an information for adulteration accordingly. On the case being heard, it was considered necessary that the spirit should be analysed, and to save the time required in communicating with the Government Analytical Chemist, a local gentleman, well up in physic, was called as a witness, when the following colloquy took place. The police sergeant to medico: "What are you?" "An analytical chemist." "Can you analyse rum?" "I should tink so" (the doctor was a German), "I've been a chemist all my life, and a publican for twelve months." "Do you call that good rum?" asked the sergeant, pouring out a tumblerful (about a pint and half) of the disputed spirit, about 35 overproof, and handing it to the witness. The doctor swallowed the draught without winking, and after a time replied, "That's good rum." Then the Police Magistrate asked of the witness, "What quantity will you require to make an analysis, and how long will you require to make it?" To which the analyst replied—again after mature consideration—"Your Worship, I couldn't analyse less than five gallons, and it would take me three weeks to do it." The Police Magistrate dispensed with the analysis under the circumstances.

MELBOURNE HEALTH SOCIETY.—We abridge the following from the *Daily Telegraph* of the 31st August:—A meeting of ladies and gentlemen interested in the formation of a society for the adoption of such means as would ensure a better system of sanitary supervision in Melbourne and its surrounding districts, was held on 30th August. On the motion of Miss Turner, the Hon. James Service was voted to the chair, and he announced the objects of the society to be—1. To create an educated public opinion with regard to sanitary matters in general by the aid of the platform, the Press, and other suitable means; 2. To induce and assist people by personal influence, example, and encouragement to live in accordance with recognised laws, whereby health is maintained and disease prevented; and 3, to seek the removal of all noxious influences deleterious to the public health, and to influence and facilitate legislation in that direction. Dr. Neild moved the first resolution, affirming the desirability of forming the society, and, in doing so, called attention to its great necessity; for, notwithstanding legislative efforts, and those of the appointed medical boards, it was difficult to make the general public attend properly to sanitary matters, even in Melbourne, which was supposed to be an advanced city. He enlarged more particularly on the necessity for improvement in the homes of the working classes. Dr. Patrick Smith said that he anticipated much benefit would result from the formation of such an association which he anticipated would go further than merely dealing with sanitary laws, but would ubiquitously watch over the public health in the way of conserving the parks and reserves, and preventing the adulteration of articles of food and drink. The prevention of epidemic diseases was also a matter for the society to deal with, and he had no doubt the spread of such ailments could be materially curtailed by the amount of knowledge as to sanitary laws which could be disseminated by the society. It was then resolved that a circular should be issued, notifying the establishment of the society, and soliciting persons to become members, and office-bearers were elected.

DUBBO WEATHER.—The *Dispatch* of the 3rd instant draws the following lively picture:—Every second one you meet has a hacking cough—the pleuro, dog disease, or whatever else it may be called. The season has undoubtedly been remarkably severe, Mercury boiling up to 120 one day and next down to zero or some other low number suggestive of a cabin in one of the Arctic exploration ships. One day a silk coat, as thin as a sixpence or a sheet of tissue paper; next day, a wind as cold as a stepmother's friendship, and a coat as thick as Irish frieze. This sudden, erratic change in the temperature, of course, perplexes the most weather-wise, and no one can tell in the morning what to prepare for during the day—so that every one has got the cold and barks in the most approved fashion. Hot rum toddy, greased with Morris's favourite butter, is the popular nostrum, even among the Sons, who, of course, take it medicinally.

THE SUGAR INDUSTRY AT MACKAY.—We are in receipt of the Government return of the sugar and rum produced in the colony for the year ending 31st March, 1875. During the past year 12,108 tons of sugar were produced in Queensland; of this amount 5480 tons, or very nearly half the total yield, came from Mackay. Maryborough returned 2825 tons, the Southern districts 3344 tons, and Cardwell 485, during the same period. The return of sugar during the previous year was 7987 tons; according to the report the increase will be very slight during the present year, owing to the great injury done by the rust to the crops in the Maryborough and Southern districts. At Mackay the increase in the return of sugar will not be so great during the present season as it was during the previous one, owing partly to the fact that there have been no new mills erected this year, and partly that the rust, although not so harmful as was at first feared, will undoubtedly have some effect on the total yield. The crop for this district will not exceed, if it quite reaches 6600 tons, and this will probably be equal to half the total production of the colony, about 13,000 tons. The consumption of sugar in the colony amounts to some 8000 tons; there will thus remain about 5000 tons available for export—a quantity hardly sufficient to have any appreciable effect on ruling prices in the Melbourne market, to which the greater bulk of the sugar will find its way. There is every prospect that prices will rule higher than they did last year for first-class qualities, such as are manufactured at the principal mills in this district, where the vacuum pan process is in use. The only check that has yet been experienced to the successful cultivation of sugar here has been the attack of rust to which some of the cane fields have this year been subjected. This attack may, in a great measure, be attributed to the unexampled amount of rainfall during the first five months of the year, and we do not doubt that our planters, by extra care in cultivation, and by selecting only those varieties of cane which are found best able to withstand disease, will succeed in successfully battling with the effects of the rust. Labour from the South Sea Islands is at the present time more easily and cheaply obtained than ever, and this must always be a great consideration with planters, who have to depend so very largely on hand labour, both in cultivating the cane and manufacturing the sugar. Taking it altogether, we may fairly conclude that the sugar industry at Mackay is in no danger of becoming in any way a failure; and although matters may be somewhat depressed at the present moment, we have no doubt that they will soon mend, and that it will be found that the anticipations of those who predicted a failure in the crop, will be proved to have been quite premature. The rise of the sugar industry in Queensland has been hitherto most rapid and successful, and it would be weak and foolish to begin to despair at the first check met with. In 1867 the total amount of sugar manufactured in the colony was 168 tons which in seven years had increased to over 12,000; and we are confident that another seven years will witness a yet more rapid development, in the north, of this most important industry. During the past year 217,000 gallons of rum were produced, of which quantity 81,000 gallons were manufactured at Mackay.—*M. Mercury.*

A STRANGE NARRATIVE.—The *Ballarat Star* writes:—"One of the principal local sharebrokers, Mr. David Ham, gives us a narrative of circumstances in which a short time ago he was mixed up, and which would be almost incredible if it came from a less reliable authority. About twenty miles from St. Arnaud, at a place called Dobobochie, near Mount Jeffcot, Mr. Ham has a selection on which there is a cottage erected. Mr. Ham was getting a water-tank constructed, and the contractor, Mr. Baker, had permission to occupy the cottage while the work was being performed. Not long since Mr. Ham was on a visit to the place, and while there Mr. Baker and one of his own daughters started off with a horse and cart to St. Arnaud to do some shopping. Having completed their purchases, and got the articles placed in the cart, a start was made for home; but before they had proceeded more than five miles the horse and cart got bogged. Just as a fresh start was about to be made, Mr. Baker called his daughter's attention to a little brown parcel that was lying on the hillock, apparently overlooked. The girl at a glance saw that the parcel did not belong to them, and said so. On picking it up and opening it, however, it was found to contain £24. Mr. Ham was uneasy at Mr. Baker's not having returned, and proceeded to change his shoes to go out to see if the cart was coming. A boy with a lighted candle went into the room, and the bed caught fire unperceived by the boy. Mr. Ham was outside when the glare of the fire attracted his attention, and he ran in. The bedclothes were then ignited, and the girl's clothes that were hanging on the wall were in flames. Fortunately, however, the building was saved. Next morning the wayfarers returned with the horse and cart, and handed over to Mr. Ham the money that had thus mysteriously come into their possession. Mr. Ham duly inserted an advertisement in a journal in the district, but no claimant appeared. Some little time afterwards Mr. Ham went to a bank and made inquiry regarding a name on one of the cheques, and here he elicited information that led him to form a conjecture as to who was the owner of the money. He then started off to a shop to buy the girl some clothes to replace those which had been burned, and while jocularly chaffering about the quality and price of the goods, he asked the shopkeeper if he remembered a man and a girl being in the shop on a certain day, and if the shopkeeper had found any money. The shopkeeper replied that he remembered the circumstance of the purchases being made, and he further remarked that he had found no money then or since, but he said that some time previous to the day referred to some money had been taken out of a place in the shop where he kept it, and he never could discover how he had lost it. He then gave a description of the missing cash, which corresponded exactly with the parcel that had been given to Mr. Ham. Mr. Ham then related the whole affair to him, and handed him the money."

THE COLONIAL MUTUAL LIFE ASSURANCE SOCIETY. The usual quarterly meeting of the General Committee of management was held on the 31st August, his Honor Judge Pohlman, vice-president, presiding. The managing-director submitted a report, from which it appeared that the business transacted during the past three months exceeded that of any previous quarter since the commencement of operations. The policies issued had been 198, assuring £16,972 and annuities £58 6s., making a total of 721 policies issued. The premiums received were £1420 17s. 8d. The annual premium revenue is now £6129 14s. 2d. from 511 policies. The report was adopted, and, after various routine business had been transacted, the meeting closed. ADV.

TELEGRAPHIC MESSAGES.

AUSTRALIAN ASSOCIATED PRESS TELEGRAMS.

WEST MAITLAND.

SATURDAY.

In the alleged libel case of Solling versus Thackeray and Sweet, the Attorney-General declines to prosecute on behalf of the Crown.

A match took place on the racecourse on Saturday afternoon for £50 a-side, between Free-selector and Kildare. The distance was two miles; and Free-selector won with something in hand by two lengths.

BALLINA.

SATURDAY.

ARRIVED.—September 4: Welcome Home, Storm King, and Atlantic, from Sydney.

The Neptune, Andrew Fenwick, Alpha, and Octoroon are ready for sea.

Wind, south-east.

LISMORE.

SATURDAY.

A complimentary dinner was given last evening to Mr. Ralph Richardson by the principal inhabitants of Lismore, as a token of esteem for the manner in which he has carried out the heaviest and most costly works in connection with the telegraphic department in this neighbourhood. The chair was taken by Mr. T. M. Girard, J.P. After the usual loyal toasts being drunk, Mr. Richardson, in replying to the toast, "The guest of the evening," proposed "Prosperity to Lismore and interests," which was ably responded to by Mr. J. Stocks, J.P. Several other toasts were proposed and responded to by the company. The dinner was all that could be wished, and one of the most pleasant evenings spent in Lismore was brought to a close about half-past 12—all wishing the guest God speed and every happiness.

BRISBANE.

SATURDAY.

Tenders have been invited for the construction of wharfs near the Petrie Graving Dock at South Brisbane.

Ex-Bishop Tuffnell has presented £500 to the Corporation, the interest to be expended in the insurance and repair of Bishopthorpe.

Several Anglican Chinese converts will be confirmed to-morrow.

Bishop Barker and other southern Church dignitaries have been invited to officiate at the Bishop of Brisbane's installation.

Warry's liabilities amount to £17,000; an inspection committee has been appointed.

At Cooktown another rush has taken place, on the opposite side of the Endeavour River, eight miles from Cooktown.

ARRIVED.—City of Brisbane.

MELBOURNE.

SATURDAY.

A quantity of brown trout ova, packed in moss and snow, has been received from Tasmania for the Geelong gardens.

The following exhibition awards have been made:—Alderson and Sons, Sydney, for the manufacture of leather and saddles; M. F. Forsyth, Parramatta, second prize; leathers—Charles Gillespie, Goulburn, second prize; boots and shoes, Refuge present, very satisfactory.

A report is current that it is not intended by the Government to appoint another County Court Judge in place of Mr. Dunne.

SUNDAY.

A boat containing two men and four boys, from the training ship Nelson, was capsized during a squall in the bay to-day; they were rescued from their critical position with difficulty by a boatman.

The Rev. Murdock M'Donald, of Nairn, Scotland, has accepted the pastorate of the new Scots' Church at Toorak.

The East Melbourne Cricket Club's expenditure during the year amounted to £1103.

Mademoiselle Ilma de Murska and Madame Ristori had good houses on Saturday—especially the former. There was over £400 taken at the Town Hall.

The Omeo (s.) arrived off the Promontory this morning.

ADELAIDE.

SATURDAY.

A magnificent discovery has been made at the Moonta mines of a lode, five feet wide, of rich ore, which will give work for years.

The report of the Mutual Marine Insurance Company shows a net loss of £10,000 for the last half-year.

Wheat, 5s., and quiet.

HOBART TOWN.

SATURDAY.

Very disorderly proceedings took place in the Assembly, owing to Mr. Balfe stigmatising the public works scheme of the Government a "swindle;" he also called the Minister for Lands a "brute." Mr. Balfe was compelled to apologise.

ABSTRACT OF SALES BY AUCTION THIS DAY

G. KISS.—At his Bazaar, at 12, Thoroughbred Horses, &c.
GIBSON'S Horse Repository, at 10, Horses, Buggies, &c.
G. M. PITT AND SON.—At Homebush, at 11, Fat Cattle.
HARRISON, JONES, AND DEVLIN.—At Homebush, at 11, Fat Cattle and Sheep.
SULLIVAN AND SIMPSON.—At Homebush, at 11, Fat Cattle.
M. ASHER.—At his Mart, at 11, Sewing-machines, Bedsteads, Bedding, Tubs, Buckets, Furniture, Pigeons, &c.
M. L. SALAMON.—At his Rooms, at 11, Tea, Groceries, Oilmen's Stores, Sugars, Boiled and Linseed Oil, Tartaric Acid, Wines, Brandy, Porter, &c.
M. MOLONY.—At his Rooms, at 11, Boots and Shoes.
E. E. THRELKELD.—At his Rooms, at 11, Woolpacks, Gas Tubing, Fencing Wire, Register Grates, Hoop Iron, Earthenware, Weighing-machines, &c.
WOOLLEN'S Horse Repository, at 11, Horses, Carts, Buggies.
A. MOORE AND CO.—At the Mart, at 11, Household Furniture and Effects, Mangles, Sewing-machines, Counters, Shopfittings, Sundries, &c.
T. P. LISTER.—At Moon's Auction Rooms, at 11, Household Furniture, and Effects, Pianoforte, Billiard-table, &c.
W. PRITCHARD.—On the Ground, at 3, Cottages and Land, Alexandria and Waterloo.
DUNN AND LISTER.—On the Premises, No. 367, Elizabeth-street, at 10, Household Furniture and Effects; at their Rooms, at 11, Unredeemed Pledges.

WRECKS IN BASS'S STRAITS.—The *Argus*, September 1, says:—"The wreck recovery operations, which have invested King's Island with a degree of prominence for many months past, are now virtually at an end, and Currie Harbour is for the present desolate and unvisited, except by a few hunters. The schooner Ellen and Elizabeth returned from the island yesterday with the last of the cargo from the wreck of the Blencathra, and when she left, on Saturday last, there was no vessel at Currie Harbour. The cargo brought across by the schooner comprises whisky, iron pipes, bagging, woolpacks, paper, &c., together with a quantity of ship's fittings. The schooner Victoria will make another trip to the scene of the wreck, to take away the working gear and odds and ends."

VICTORIA THEATRE.—To-night, Offenbach's "La Perichole" will be put upon the stage with Miss Emilie Melville in the leading *rôle*. This is said to be one of the most attractive of the *operas bouffe* yet produced; and great preparations have been made to ensure a thoroughly successful performance.

QUEEN'S THEATRE.—Madame Fannie Jannaschek will appear this evening in the double part of Lady Dedlock and Hortense in "Chesney Wold," a dramatic adaptation of Dickens' "Bleak House. This is the piece in which the *tragedienne* made so profound an impression upon the public in the United States. It has been in rehearsal during the past week, and doubtless Madame Jannaschek will have little difficulty in eliciting the approbation of the public in a piece so eminently calculated to display her talent.

UNITED STATES MINSTRELS.—There was another change of programme on Saturday night. An apology was tendered for Mr. A. J. West, who, being indisposed, was unable to sing "The little one that died." Mr. G. Holly gave "Susan Jane" in capital style; and Mr. G. W. Rockefeller's rendering of "Mamma, where has baby gone?" was much applauded; so also was Mr. T. Campbell's delivery of "She whispers of home" (composed by N. La Feuillade). Mr. T. Buckley then gave "Gipsy Davy" with considerable humour. This was followed by Mr. L. Benham's rendering of "Hark the drum," a spirit-stirring melody and excellently sung, eliciting a clamorous demand for an encore. "Uncle Ephe's Serenade" is a chorus and "walk round" of the usual style; and this brought the first portion of the entertainment to a close. Mr. Holly and Mr. Buckley were the corner men, or "low comedians," and their jokes and repartees were witty and smartly interchanged. Of the rest it may be mentioned that Hudson's "High Pedestal Dance" is a good specimen of step performances; and Messrs. Buckley and Holly's "Happy Little Nigs" was encored. The sketch "I'm from the country" is a negro absurdity, better known as "Stocks Up and Down." Mr. L. Braham's admirable rendering of "she let me like a Soldier fall" added another to the list of encores. "Jack Sheppard" is a negro farce of the usual class, but the two principal characters are more like Robert Macaire and Bertram in sable than Jack Sheppard and Blueskin. Hudson's comicalities succeeded the farce, and the whole was brought to a termination by "Troubles at the Royal Hotel," a whimsical farce, representing the mishaps of a luckless traveller, who had taken lodgings for the night at an hotel, one of the inhabitants of which was a young and lively gorilla. Mr. Snooks and Jacko were very funnily played by Buckley and Holly, whilst the landlord, Westsheer, found an able exponent in T. Campbell.

ARRIVAL OF THE MAIL

VIA TORRES STRAITS.

A. A. P. TELEGRAM.

TOWNSVILLE, SATURDAY.

THE E. and A. steamer Brisbane left Hongkong on the 11th August, and Singapore on the 20th. She arrived at Cooktown on the 3rd September, and landed 380 Chinese; passed Bowen at daylight to-day, and is due in Brisbane on Wednesday at daylight.

PASSENGERS.—For Brisbane: Miss Coglan, Mr. Raett, Captain Dumbreck. For Sydney: Messrs. Martin, Purchase, and twenty-three steerage passengers. For Melbourne: Mr. and Mrs. Riley, Mr. Shand, and thirteen in the steerage.

The cable telegrams have anticipated the English news.

The Indian news states that Mr. Forsyth's mission to Burmah has not resulted satisfactorily. The Burmese are levying double duty on British goods. There is much excitement among the Chinese traders in Rangoon on the matter, and strong representations have been made to the British Government.

There is a great stir all over India about the coming of the Prince of Wales. He goes to Ceylon after leaving India. There will be no durbars in Bombay; the Viceroy goes to meet him there.

The new Indian tariff has been published. Export duties are abolished, except on indigo. A 5 per cent. import duty is imposed on long-stapled cotton, 4 rupees a gallon on spirits, 2 rupees 8 annas on sparkling wines, and 1½ rupee on all wines but claret and burgundies.

A movement has taken place in China to stop the exportation of women to California.

There is some excitement about the weakness of the British naval force in the China Seas.

The native States in the Malay Peninsula are going ahead rapidly, many Chinese are settling down there.

SINGAPORE.

The new Government of the Straits is very popular.

A grand ball took place on the 27th August, in honour of the Queen's birthday.

The Estimates for the next year are published; the revenue is £292,275; the expenditure, £280,643.

The Governor made a trip to the native States on the Siamese side of the Peninsula.

The coolies on board a native vessel, the Delhi, rose and killed their guard, and ran the vessel ashore.

New quarantine rules are proposed, the same as at Mauritius, but opinions are against them. The matter is to be considered during the ensuing session of the Council.

Australian coal, 7¼ dollars; market dull.

LECTURE ON MORMONISM.—On Saturday night, Mrs. Fanny Stenhouse delivered a lecture, in the Masonic Hall, on the "Inner Life and Religious Faith of Mormonism." There was an audience of from three to four hundred persons in all parts of the hall and gallery. Having been introduced to her auditors, by whom she was favourably received, Mrs. Stenhouse proceeded first to explain that, having been converted to Mormonism when a young woman in England, she became the wife of Mr. Stenhouse, a Mormon elder; that she first went with him on a mission to Switzerland; that she returned to England in 1854; that in the following year she went to America and lived with her husband until 1859, when they crossed the Rocky Mountains to Utah. She stated that she had lived there for years, and been acquainted with Brigham Young, having been a guest at his house and he at hers. A few years ago, a few gentlemen in Utah resolved to oppose the teachings of Young; and she felt proud in saying that she was the only woman who signed a declaration for freedom; and since then she had taken an active part in endeavouring to overthrow the Mormon despotism. Mrs. Stenhouse, in the most self-possessed manner and in forcible terms, went on to describe life among the Mormons as she personally observed it. She said that it was not a low standard of morality that led Mormon women into their condition of polygamy—that they were betrayed into the practice by religious influences. There was no mention of polygamy in the creed at first, but celestial marriages were afterwards revealed to the prophet. "The sealing of wives to all eternity," "the baptism for the dead," "the marriage for the dead," and the shocking results of these doctrines were referred to at length; and Brigham Young's efforts to convert the sovereigns of Europe were described. The reception of Mormon immigrants at Utah by the elders, the courtship and marriage relations of the polygamists, and many of the repulsive features of Mormon life were pictured with dramatic skill by Mrs. Stenhouse, and her audience were evidently highly entertained by her lecture, which lasted about an hour and a half. She was repeatedly applauded. At the close of the lecture she expressed her willingness to answer any questions respecting Mormonism. Several were asked and answered, and a vote of thanks to the lecturer closed the proceedings.

PICNIC.—A most pleasant *reunion* took place on Saturday last, the occasion being a picnic given by the gentlemen connected with the firm of Messrs. R. Towns and Co. to Mr. E. M. Stephens, the chief of the clerical department. There were about thirty gentlemen present—the invited guests being Captain Monro and Mr. Spier, of the A. S. N. Co., and Captains Darly, Higben, and Downer. The party embarked at the Circular Quay on board Captain Rountree's fine new steam-launch and proceeded down the harbour, visiting the many beautiful spots on the northern shore, and thence to Watson's Bay, where they landed and enjoyed the full benefit of the fine westerly breeze from the cliffs at South Head. From thence they proceeded to Mosman's Bay, and, having gained the heights overlooking that romantic sport, sat down to a very *recherché* luncheon *al fresco* which had been arranged in the vicinity of Mr. R. Harnett's new house. Captain Rountree did the honours as the oldest gentleman present connected with the establishment. The invigorating air had thoroughly sharpened the appetites of all, and full justice having been done to the good cheer provided, and the usual loyal toasts duly observed, Captain Rountree proposed the health of Mr. Stephens, which was feelingly acknowledged by that gentleman. The party then proceeded to amuse themselves by joining in various games, and returned to Sydney about 7 o'clock, having passed a most delightful day.

DEARTH OF TREES IN SOUTH AUSTRALIA.—A traveller through the Crystal Brook and Broughton areas cannot fail to be struck with the great and increasing scarcity of timber, the Port Pirie correspondent of the *S. A. Register* remarks, and he adds:—Perhaps in no part of the colony would the formation of forest reserves be of more utility than there. With the exception of a few favoured spots, as, for instance, the banks of the Broughton and Rocky Rivers, a few patches of stunted scrub on the far hills are the only visible representatives of their tribe, and even these are fast disappearing. For mile after mile a person travels over magnificent country, only wanting a belt of forest here and there to almost rival the mythical loveliness of the Valley of Rasselas. The vegetation approaches to tropical luxuriance and richness under waving paddocks of springing corn, occasional fallows rank with aftergrowths of wheat, rich with tender grasses, and brilliantly starred with many-hued wild flowers. At the edges of the ploughed land—on the fenced roads wherever the treeless traffic will let it live—one may wade knee-deep in wild clover and other herbage. It seems strange that in forming land so fertile and scenery so lovely nature should have withheld the garniture and shelter of growing timber: but it will be stranger still if those to whom so fair an inheritance has fallen do not use every available means to add this crowning beauty to the whole. If timber were not so entirely indispensable as it is to the requirements of the settlers themselves, if there were not a constantly increasing demand which must be met from somewhere, if there existed none of the reasons so clearly and forcibly advanced by Mr. Krichauff, why every effort should be made without delay to promote the growth of timber; if the formation of forest reserves did not produce the additional refreshment of a single shower, or neutralise one atom of atmospheric malaria, or modify the scorching influence of a single hot wind; if all this were so such reserves would still be well worth the forming for the sake of their beauty alone. But when none can dispute the existence and importance of all these reasons for planting and fostering the growth of timber, their aggregate force assumes a cogency which cannot be ignored, and ought not to be neglected for one single day. The main roads through the areas could be easily turned to accountfor this purpose, if a strip were fenced off on each side. There is plenty of room for this and for the traffic too. These might be at once planted with suitable trees, which would soon change the monotony of the unbroken lines of ugly fences, and the exasperating straightness and angularity of their outline, into grand avenues of leafy beauty, wherein—irrespective of more substantial advantages—those who come after us, if not we ourselves, could enjoy in this fair southern land, the rural delights hitherto only vague memories of the rose-garlanded by-ways of old England.

THE AUSTRALIAN JOCKEY CLUB SPRING MEETING.

FIRST DAY.—SATURDAY, SEPTEMBER 4, 1875.

SATURDAY was the first day of the Spring Meeting of the Australian Jockey Club—our Colonial Derby Day; and, as may readily be imagined, it was a vastly important event to thousands of our population, who, true to their British characteristics, are always ready and willing to enter into the good old national sport of horseracing. From an early hour in the morning the whole city was alive with the hurry and bustle which are the indispensible accompaniments of such an event; vehicles of unlimited number and of every variety crowded the principal thoroughfares, while the pavements were thronged with pedestrians, elbowing and jostling one another, and showing, by their hurried locomotion, their evident anxiety to conclude their business affairs in time for the races. At the course, the usual animated scene was presented. As far as the eye could reach, along the Randwick Road, Sydney-wards, was to be seen what appeared to be an inextricable complication of carriages, cabs, omnibuses, and light vehicles of every conceivable kind, all fully freighted with lovers of the sport, and driving onwards with an apparent recklessness highly suggestive of immediate danger to the passengers. Each side of the roadway also was lined with sturdy pedestrians, who, unable or unwilling to satisfy the high demands made in the public vehicles, trudged bravely onward towards the general goal. As the various vehicles arrived at the gate, they deposited their burdens and were then marshalled in suitable and convenient order, under the direction of the officers of the Transit Commissioners, by the side of the road, where they awaited their opportunity for a return journey, or, as was the case with private conveyances, they were driven upon the course and ranged along by the fence which encloses the inner side of what is called the straight run. Three or four men, provided with capacious bags to hold the coin, stood at the gate to intercept the intending spectators, and brisk work they found it to receive the silver shower that was poured upon them, notwithstanding that no change was given. By noon the course had quite a gay and picturesque aspect, with the stands well filled with spectators, among whom was a goodly number of handsomely-dressed ladies. The usual arrangements in connection with the racing were as complete as they could possibly be; and everything worked with the utmost smoothness. A very noticeable improvement was the new saddling paddock, which has been enclosed at the rear of the Derby Stand by a high fence, constructed of corrugated iron. It is amply commodious, and supplies every needful requisite. The usual number of booths were provided, at which the "inner man" was plentifully supplied; and a thriving trade seemed to be driven at these all, notwithstanding the lucrative prices which the caterers demanded. The bookmakers were present in full force, with their tempting odds, and their well-known cries made themselves loudly heard above the surrounding noises. For those who inclined to what *appeared* a more sure and reliable means of easily enriching themselves, there were the popular spinning-jennies, at which hard and sharp featured individuals, with an assumed simplicity which ill became them, sought, with all the power their lungs could command, to induce the onlookers to relieve them of piles of money, which they displayed with a carelessness that showed how little they cared for them. Speculators, however, seemed to be few, the good fortune so lavishly offered being accepted by only a few, the greater part of whom were easily recognised to be what the sporting fraternity call "buttoners." A few card-sharpers tried to drive their "honest" trade, but they were so frequently agitated by real and false alarms of "police," which caused them suddenly to discontinue their operations and pocket their unlawful implements, that they did little else than provide amusement for those whom they endeavoured to snare. The weather was delightful, though the southerly wind, which blew rather strongly, was colder than was quite agreeable, but, as the afternoon wore on, it moderated, and left nothing better to be desired.

The greatest good order prevailed throughout the day, and the sport was fully enjoyed by everyone, excepting perhaps the few who suffered depression of spirits in consequence of their unsuccessful speculations; but what enjoyment they lacked was fully counterbalanced by the excessive joy of those who gained by their loss. His Excellency Sir Hercules Robinson, the Hon. Lady Robinson, Captain St. John, Mrs. St. John, and suite were present during the whole of the afternoon, as were also many prominent citizens. As his Excellency left the course after the termination of the last race, he was loudly and most enthusiastically cheered.

The course was in very good order and the racing of a high character. Eight faced the starter for the Hurdle Race, and Gaffer Grey was a very warm favourite; but he never had a chance with Cronstadt, who fairly ran away from his horses at the finish, and won by any number of lengths. A down tried conclusions in the Trial Stakes, for which the Sour Grapes colt was most in demand, and he won with a trifle to spare from Barbara and Esmeralda, who had only a short head between them. A brilliant field of eleven left the paddock for the Derby, and the supporters of the different candidates each and all appeared confident of success. The Valetta colt was at 6 to 1, at which short price he was very heavily backed, and Valentia, Richmond, the Sylvia colt, and Connaught were all in request at the figures quoted. The start was a good one, and, indeed, considering the disadvantage Mr. Bowes was under, owing to his hunting accident, he did very well with the flag. Ringwood kicked Valentia on the heel when at the post, and the accident may have interfered with his chance. Hyperion cut out the work at a great pace till half-a-mile from home, when Valentia, Connaught, Richmond, and the Valetta colt began to draw to the front; but at the distance there was nothing in it but the Valetta colt and Richmond, and the latter, beautifully ridden by Hales, won a grand race from the favourite. Valentia and Connaught were also handled well in the race, and the latter ran well until he was beaten at the last turn. Richmond had a little left in him at the finish, but many think that had Brown made more use of his colt the finish would have been closer. The winner was decorated with the "blue ribbon," and led round the paddock after his victory. He is a very strong wiry animal, and was bred by Mr. Andrew Town, of Richmond. The secretary, the clerk of the course, and other officials performed their duties like clock-work, and the members of the Press met with every civility; and, thanks to the "Guardian," the reporters' gallery was left to those for whose use it was constructed. The Epsom Handicap proved that Mr. Scarr *is still in* great "form;" and the following is an account of each race.

Hurdle Race.—A Handicap Sweepstakes of 10 sovereigns each, h. ft., or 2 sovereigns if declared by 1st September, with 100 sovereigns added. Weights on or before 24th August. About two and a half miles.

Mr. R. Rouse's b g Cronstadt, aged, 10 st (M. Bryant) ... 1
P. Glenister's gr g Gaffer Grey, aged, 10 st 2 lbs (Chiffney) ... 2
F. C. Gwyder's b g Welshman, aged, 11 st 10 lbs (Crippa) ... 3
M. Sheehan's br g Dan O'Connell, 5 years, 9 st (owner) ... 4
E. Terry's b g Fisherman, 6 years, 9 st 2 lbs (O'Neil) ... 5
P. Glenister's gr g Jackey, 6 years, 9 st 12 lbs (Jones) ... 6
W. P. Bowes's b g Emigrant, 5 years, 9 st 7 lbs (G. Mason) ... 7
F. C. Gwyder's b g Electric, 5 years, 9 st 7 lbs (Howe) ... 8

Betting: 5 to 1 v. Gaffer Grey, 3 to 1 each v. Welshman and Cronstadt, 5 to 1 v. any other.

The lot got away on terms, and Cronstadt, Welshman, Jackey, Gaffer Grey, and Dan O'Connell negotiated the first hurdle in order. Cronstadt took up a commanding lead at the tan-turn and led Jackey and Emigrant some half dozen lengths when passing Cutta's, but at the far side of the course Bryant steadied him, and Fisherman took up the running attended by Jackey and Gaffer Grey. Here Dan O'Connell came to grief, but was quickly remounted. No alteration of importance occurred until passing the stand for the second time, when Cronstadt and Gaffer Grey assumed the leading positions and led over the flight of hurdles opposite the stand, Welshman, Electric, and Emigrant next in order, while Jackey ran round. No change happened during the rest of the journey, except that Cronstadt got further away from his horses the further he went, and won in a canter by nearly a twenty lengths from Gaffer Grey, who finished about the same distance in front of Welshman, and then a long way out of it came Emigrant, Electric, Fisherman, and Dan O'Connell. Time 5 minutes 27 5-10 seconds.

Trial Stakes.—A Sweepstakes of 6 sovereigns each, h. ft., with 60 sovereigns added. For 3 years old and upwards which have not won a prize exceeding 50 sovereigns in value up to time of entrance. One mile and a quarter.

Mr. E. De Mestre m h c by The Marquis—Sour Grapes 3 years, 7 st (Smith) ... 1
Sir H. Robinson's ch f Barbara, by Kingston—Young Gulnare 3 years, 6 st 9 lbs (Hanks) ... 2
Mr. R. Rouse's b f Esmeralda, by Yattendon—Busyfoot, 3 years, 6 st 9 lbs (W. Martin(er)) ... 3
W. Kite's br c Dockwood, 3 years, 7 st (Sheehan)
J. Tate's bl h The Barb, 4 years, 7 st 7 lbs (Cleary)
J. Farraher's br g The Ace, 3 years, 6 st 11 lbs (Huey)
J. Driscoll m b h Sentinel, 5 years, 9 st 2 lbs (J. Driscoll)
S. Bradbury's ch m Prince Charlie, 3 years, 7 lbs (Hurley)
J. J. Miller's ch c Janitor, 3 years, 7 st (Westbrook)
J. Tait's b c Gillie Callum, 3 years, 7 st (Hatch)
W. Archer's ro g by Gemma di Vergy—Princess, 4 years, 8 st 4 lbs (H. Lewis)
T. Ivory's ch f Miss Phœbe, 3 years, 6 st 9 lbs (W. Gainsford)

Betting: 2 to 1 v. Sour Grapes, 4 to 1 each v. Gillie Callum v. Janitor.

After great delay Mr. Bowes dispatched the field to a good start, Gillie Callum and Barbara getting best away, attended by Miss Phœbe. Gillie Callum was taken to the front as soon as they got on their legs and led on to Cutta's, Miss Phœbe, Janitor, and Barbara next, the others in a great heap, Sentinel and the Princess colt last. At the far side of the course Mr. Tait's colt had a lead of a couple of lengths of Miss Phœbe and Janitor, who on terms, led the Sour Grapes colt and Dockwood a length. Esmeralda joined the first flight when going up the hill, where the leaders were at Gillie Callum's girths. When half a mile from home the favourite assumed the command, and turned into the straight, waited upon by Gillie Callum, The Barb, Esmeralda, Dockwood, and Barbara. Esmeralda and Barbara came out at the distance, racing home, head and head, vainly attempting to catch the son of Sour Grapes, who won cleverly by three-quarters of a length, while Barbara just did Esmeralda by a head for second; Janitor was a good fourth, and the Gemma di Vergy colt fifth, and they were succeeded by Gillie Callum, Miss Phœbe, The Barb, and The Ace—the others being beaten off. Time, 2 minutes 18 seconds.

The Derby.—A Sweepstakes of 30 sovereigns each, h. ft., or 5 sovereigns if declared by the 1st March, 1875. For colts, 8 st. 10 lbs.; and fillies, 8 st. 5 lbs., then 3 years old. Second horse to receive 60 sovereigns out of the stake. The half forfeit to be paid before 4 p.m. on the day preceding the race, or the nominator will be liable for the whole stake. One mile and a half.

Mr. W. Branch's b c Richmond, by Maribyrnong—The Fawn, 8 st 10 lbs (T. Hales) ... 1
G. Hill, jun.'s br c by Kingston—Valetta, 8 st 10 lbs (T. Brown) ... 2
Sir H. Robinson's br c Valentia, 8 st 10 lbs, by Yattendon—Vanity (W. Yeoman) ... 3
Mr. W. Dakin's br c Bullion, by Millionaire—Clove, 8 st 10 lbs (S. Davis) ... 4
E. De Mestre's br c Redwood, by Maruka—Spring Blossom, 8 st 10 lbs (G. Dunnelly) ... 5
——— gr h or br c by Fireworks—Sylvia, 8 st 10 lbs (M. Thompson) ... 6
A. Bowman's b f Kismet, by Barbarian—Avalanche, 8 st 5 lbs (G. Thompson) ... 7
J. Tait's b or br c Connaught, by The Barb—Mayournea, 8 st 10 lbs (J. Ashworth) ... 8
T. Lee's br c Ringwood, by Yattendon—Alphœa (J. Driscoll) ... 9
Sir H. Robinson's b c Hyperion, by Lord of Linne—Miss Pitsford, 8 st 10 lbs (T. O'Connor) ... 10
Mr. J. Bales' b or br f Cerito, 8 st 10 lbs (J. Ramsay) ... 11

Betting: 6 to 4 v. the Valetta colt, 3 to 1 v. Valentia, 4 to 1 v. Richmond, 8 to 1 v. Ringwood; 10 to 1 each v. the Sylvia colt, Connaught, and Redwood; 15 to 20 to 1 v. any other.

Two failures occurred, and then the flag went down to a capital start, the colours of Hyperion, Connaught, and Bullion showing most prominently. Hyperion, against the rails, led Connaught a length past the stand, Bullion, in the centre, lying third, with Redwood, Valentia, and Richmond on his quarter, and succeeded at an interval of two or three lengths by the others in a bunch, Cerito and Kismet whipping in. Hyperion, forcing the pace in the interest of Valentia, conducted them round the tan-crossing and by the rocks by a couple of lengths—Connaught, Redwood, Valentia, Bullion, and the Valetta colt following in order. Before passing the seven furlongs post Redwood went up second, and Hyperion led him a clear length along the opposite side of the course; Connaught lay third, four lengths from Redwood, and was closely attended upon by Valentia, Richmond, and Bullion, who were about four lengths in front of the Valetta colt and the son of Sylvia. Hyperion led up the hill, Redwood and Connaught following, and a couple of lengths clear of Richmond and Valentia, who were racing on terms, and after

MEDICAL CHEMICALS, ETC.

MASSACRE OF THE INNOCENTS.—Parents valuing their children's safety will avoid soothing medicines containing opium, so frequently fatal to infants, and will use only STEADMAN'S TEETHING POWDERS, which are safest and best, being free from opium. Prepared by a Surgeon (not a Chemist), formerly attached to a children's hospital, whose name "Steadman" has but one "E" in it. Trade mark "A Gum Lancet." Refuse all other. Highly recommended by, amongst others, the Lady Susan Milbank, Ashfield, Sussex; Mrs. Captain Green, 33rd Regiment, &c. Depot—East Road, Hoxton, London. Wholesale Agents: Melbourne, Duerdinand Sainsbury.

NERVOUSNESS,
WEAKNESS,
PIMPLES IN THE FACE,
FLUSHING,
LOSS OF MEMORY,
MENTAL DEPRESSION.
All these suffering from the above ailments should apply before it is too late and irremediable to Dr. L. L. SMITH, who is the only legally qualified medical man in the Australian colonies practising solely on these diseases and their origin.
Dr. L. L. SMITH'S name is a household word, and through his means many thousands of homes have been made happy, and many whose lives were a misery to them have been restored to health and comfort.
His practice in Victoria has extended now over 21 years on this speciality of his profession. His practice extends, moreover, throughout all these colonies, and patients have visited him even from Java, Borneo, Japan, China, and India. To convey some idea of the extent of his fame and name, he has been consulted from Great Britain six times during this year 1874.
Those wishing to consult Dr. L. L. SMITH can do so by enclosing a One-Pound note, stating age, symptoms, and duration of suffering. A reply will be sent by return mail.
Dr. L. L. SMITH, for the convenience of those who personally consult him, has taken those extensive premises in Collins-street, late the residence of his Excellency the Governor. Every luxury and comfort will be found for those waiting to consult the Doctor.
Address—
Dr. L. L. SMITH,
Collins-street East,
Melbourne.
Consultation fee by letter, £1.
N.B.—For the convenience of patients in the neighbouring colonies, who wish to visit him personally in Victoria, Dr. L. L. SMITH has taken a large mansion in the suburbs, and fitted it up as a Private Hospital for the treatment solely of the above affections; and also including Gout, Sciatica, and painful nervous diseases.
Dr. L. L. SMITH has also a large Turkish Bathing Establishment for the treatment of his patients, especially such as suffer from Gout and Rheumatism.
Medicines, appropriately packed, forwarded to all the colonies.

CHURCHILL'S SYRUPS of LIME, IRON, and SODA.—Recommended by the faculty for consumption and all diseases of debility. Free from any unpleasant taste or smell.

MOLLER'S
(Knight of the orders of Vasa and St. Olaf)
COD LIVER OIL.
Selection from an overwhelming mass of testimonials from medical authorities of the highest standing in every civilized country in the world:—
J. MARION SIMS, Esq., M.D.
13, East 25th-street,
New York, March 15th, 1870.
Messrs. W. H. Schieffelin and Co.,
Gentlemen,—For some years I had given up the use of Cod-Liver Oil altogether, but since my attention was called by Dr. Sayre to your Peter Moller's Cod-liver Oil, I have prescribed it almost daily, and have every reason to be perfectly satisfied with it.
The LANCET, Vol. 1., No. XXVI.
"There is scarcely a remedy in the whole Pharmacopœia of greater therapeutical value than Cod-Liver Oil, and it is greatly to be regretted that its utility is so often impaired, and even destroyed, by its nauseous taste and rancidity. A sample of the oil, prepared in Norway by MOLLER, has recently been brought under our notice. It is one of the purest we have ever met with, and is remarkable for its limpidity as well as its freedom from rancidity and disagreeable smell and flavour."
PETER MOLLER,
821, Oxford-street, W.C., London, and at Christiania, Norway.
Wholesale Agents for Sydney:
ELLIOTT BROTHERS, 110, Pitt-street.

RANDERSON'S PODOPHYLLIN LOZENGES, wholesale and retail, J. HENRY, Brickfield-hill.

HENRY'S COLONIAL OINTMENT, in 8d pots, 1s each, at all chemists and storekeepers.

APOTHECARIES' HALL,
14, Oxford-street, near Hyde Park,
Sydney.
W. D. EAMES respectfully returns his thanks to his friends and the public for favours received at their hands during the thirteen years he has been in business, and hopes that he may continue to be favoured with their support and kind recommendation.
His establishment is possessed of every convenience needful for the accurate dispensing of prescriptions, all of which are duly copied and indexed. The fact that W. D. EAMES has upwards of 25,000 registered in his books is, he thinks, some guarantee that the medical profession and invalids have placed, and may continue to place confidence in his skill and experience. The purest drugs and chemicals only are used, and the newest medicines obtained as soon as possible.
Parcels sent all over Sydney free of charge, and orders from the country punctually attended to.

APOTHECARIES' HALL,
near Public School, Paddington.
W. D. EAMES desires to thank his friends and the public generally for the liberal support he has received for the last seven years, since opening the above Branch Dispensary, and would take this opportunity of informing them that he has lately added largely to the stock, and redecorated, the shop; and those friends who may favour him with an order, however small, may be assured of receiving civility, attention, and a really good article, at the lowest remunerative price.
In addition to a large assortment of English and American Patent Medicines, W. D. EAMES is also the appointed agent for the following preparations:—
Coutts's guaranteed Acetic Acid, &c.
Watt's Caragheen and Worm Lozenges
Row's Australian Ointment and Embrocation
Randerson's Podophyllin Lozenges
Arnold's Delectable Syrup
Henry's Colonial Ointment

21, Norton-street, Surry Hills.

LE. THRELKELD will sell by auction, at the Land Sale Rooms, on THURSDAY, September 9th, at 11 o'clock,
That substantial brick built house, containing 5 rooms, kitchen, and out-offices, having a frontage of 14 feet to Norton-street, by a depth of 108 feet to Little Norton-street.
Terms at sale.

SURRY HILLS.

CROWN-STREET.

VACANT PLOT OF LAND.

LE. THRELKELD will sell by auction, at the Land Sale Rooms, on THURSDAY, September 9th, at 11 o'clock,
All that valuable piece of land, situate in Crown-street, between Goulburn and Campbell streets, and adjoining Erwin's Hotel, having a frontage of 30 feet to Crown-street by a depth of 70 feet (all more or less).
Terms liberal.

SOUTH HEAD ROAD,
Opposite the Barracks, adjoining Mr. Harper's Property.

LE. THRELKELD will sell by auction, at the Land Sale Rooms, on THURSDAY, September 9, at 11 o'clock,
Those two shops, each containing 4 rooms, having a frontage of 34 feet 6 inches to South Head Road, by a noble depth (as Bondi-line), together with 2 weatherboard houses in the rear, one containing 4 rooms, and the other 2 rooms.
Title, indisputable.
Terms at sale.

SURRY HILLS.

LITTLE CAMPBELL-STREET,
Between Crown and Riley streets.

TWO BRICK-BUILT COTTAGES.

LE. THRELKELD will sell by auction, at the Land Sale Rooms, on THURSDAY, September 9, at 11 o'clock,
Those two neat and faithfully built cottages, situate in Little Campbell-street, and known as Dent's cottages, each containing 5 rooms, verandahs back and front, also good yards, now let at the low rent of 12s per week each.
Title unquestionable.
Terms at sale.
☞ Persons in search of a snug little freehold should not lose this opportunity.

RESIDENCE and GROUNDS,
together with
4 BUILDING LOTS,
Darling-street, and Waterview Bay.

Terms:—One-third Cash, and the balance at 6 and 12 months; or longer credit, necessary.

WILL be sold by auction, on WEDNESDAY, September 8th, at 12 o'clock, on the Ground,
That excellent dwelling-house and premises known as Broome House, containing 8 rooms, kitchen, and out-houses—the land having 176 feet frontage to St. John-street (THE CHIEF THOROUGHFARE FROM DARLING-STREET TO THE DOCK) by a 150 feet to Broadstairs-street, and close to the intersection of Adolphus-street with Darling-street.
Lot 40 has a frontage of about 40 feet to St. John-street, by 76 feet in depth.
Lot 43 has 7 feet frontage to Darling-street and 30 feet frontage to St. John-street, by 80 feet in depth.
Lots 41 and 42 have each 33 feet to Broadstairs-street, by a depth of 79 feet.
☞ By this it will be seen how centrally situated the above property is; in fact no spot in Balmain is more so, and consequently must increase in value upon present low prices.
R. F. STUBBS.
Office—326, George-street.

50 Casks PALE ALE, IN BOTTLES
6 Bales THREE-BUSHEL SACKS.

BOWDEN, MILLS, and GORDON will sell by auction, at their Rooms, 154, Pitt-street, on THURSDAY next, the 9th September, at 11 o'clock prompt,
50 casks of pale ale, bottled by Flower, each containing 4 dozen, just landed
6 bales 3-bushel bags, each containing 300.
To be sold in lots to suit purchasers.
☞ The first lots to be offered.
Terms, cash.

8 Acres 3 Roods 20 Perches.
Divided into Two Allotments,
PENNANT HILLS ROAD, close to PARRAMATTA,
opposite Longsight and next to Mr. Mason's.
Title, good. Terms, easy.

BOWDEN, MILLS, and GORDON have received instructions to sell by auction, at Creasey's Hotel, on TUESDAY, the 7th September, at 12 o'clock.
That very fine block of land, containing 8 acres 3 roods 20 perches, having about 15 chains frontage to the Pennant Hills Road, and bounded on the east by Mason's residence, on the north by Mr. Goodin's orchard, and on the west by a Government road, separating it from the late James M'Roberts' property. It will be offered in two lots, with the option of buying both.
The position of this property should strongly recommend it to persons on the look out for a good piece of land near town, and the terms will be made easy.

NICE LITTLE ORCHARD PROPERTY,
PARRAMATTA DOMAIN.

6 ACRES 3 ROODS 20 PERCHES.

4 Acres are planted as an Orchard, principally orange trees; two Cottages, Stockyard, and Slaughter-houses; the land is good, and the property has a large frontage to a branch of Toongabbie Creek.

BOWDEN, MILLS, and GORDON have been instructed to sell by auction, at Creasey's Hotel, on TUESDAY, the 7th September, at 11 o'clock,
The above mentioned property, known as Mr. J. Smith's orchard, joining the property of W. Fullagar, Esq., in the Domain, a little off the main Western Road. The orchard is just coming into bearing, and to an industrious person it offers a good return as an investment, or a very choice spot as a home.
A large portion of the purchase money can remain on the property at easy terms.
Title, good.

PROPERTIES, ALEXANDRIA, and WATERLOO,
To suit all classes of buyers.

THIS DAY, 6th September.

W. PRITCHARD will sell by auction, ON THE GROUND, THIS DAY, September 6, at 3 o'clock,
COTTAGE, four rooms, verandah, kitchen, and land, having frontages to BULLANAMING and GEORGE STREETS.
SIX COTTAGES, Bullanaming-street, two containing each 2 rooms, verandah, and kitchen; four contain 2 rooms, verandah, and good wells of water with pumps to each.
These cottages have recently been put in thorough repair, and will be sold separately or in one lot.
The next lot to be sold will be a two-roomed weather-board house, in WYNDHAM-STREET South, at the rear of Mr. Loft's Grocery, Botany Road.
This lot will be sold without the slightest reserve, and affords a very good opportunity to persons of small means.
Immediately after the above,
TWO FIRST-CLASS COTTAGES, containing each 4 rooms, verandahs, and kitchens, substantially built of brick on stone foundations, corrugated iron roofs, good wells of pure water, with pumps, &c.
These cottages are pleasantly situated at the NORTH END OF JARRETT-STREET, near the railway line, and command a splendid view.
Titles, leasehold.
Terms at sale.

5 ACRES LAND,
BURWOOD,
subdivided into Villa Sites, adjoining Mr. Henning's property, between the Railway Station and Parramatta Road.

W. PRITCHARD has received instructions from Messrs. Deane and Deane to sell by public auction, ON THE GROUND, on SATURDAY, September 18, at half-past 3 o'clock,
THIRTY allotments of land, having frontages of 50 feet each to Victoria-street, and 66 feet frontages to LANG, ELSIE, and CLAUD STREETS, by depths of 116 feet.
TERMS OF SALE, LIBERAL, viz., 25 per cent. cash, the balance by promissory notes at 3, 6, 9, and 12 months, bearing 6 per cent. interest; or if the whole of the cash be paid within one month a discount of 5 per cent. will be allowed upon the balance; or if paid within six months a discount of 2½ per cent. will be allowed upon the balance.
SPECIAL CARRIAGES per train to convey intending buyers to the ground, will leave Sydney station, at 2 o'clock, calling at NEWTOWN, PETERSHAM, and ASHFIELD, returning from Burwood at 5 p.m.
TICKETS for train and LITHOGRAPHIC PLANS of the property can be obtained at the office of the auctioneer, 148, Pitt-street.

UNRESERVED SALE.

BURWOOD,
Seven Acres of Land.
Subdivided into 18 splendid Allotments.

W. PRITCHARD will sell by auction, on the Ground, on SATURDAY, September 18, at 3 o'clock,
Fifteen allotments of land, having a frontage of 68 feet each to Adelaide-street by a depth of 181 feet each.
Three allotments having frontages to the Parramatta Road of 66 feet each by depth of 184 feet.
This property is adjoining the residence of the Rev. W. Lumsdaine, and in close proximity to the railway station.
TERMS OF SALE, LIBERAL, viz., 25 per cent. cash, the balance by promissory notes, at 3, 6, 9, and 12 months, bearing 6 per cent. interest; or, if the whole of the cash be paid within one month, a discount of 5 per cent. will be allowed upon the balance; or, if paid within six months, a discount of 2½ per cent. will be allowed upon the balance.
ABSTRACT OF TITLE and TITLE DEED will be given to purchasers FREE OF COST.
SPECIAL CARRIAGES per train to convey intending buyers to the ground will leave Sydney station at 2 o'clock, calling at Newtown, Petersham, and Ashfield, returning from Burwood at 5 p.m.
TICKETS for train, and LITHOGRAPHIC plans of the property, can be obtained at the office of the Auctioneer, 148, Pitt-street.

VILLA SITES.

PETERSHAM,
Close to the Railway Station.

W. PRITCHARD will hold a sale by auction, ON THE GROUND, on SATURDAY, September the 25th, at 3 o'clock,
Several really choice building sites, all of which are situated within four to five minutes' walk of the station.
Particulars of lots will appear in a future advertisement.
Terms will be liberal.

CITY PROPERTY.

Duke-street, Woolloomooloo.

W. PRITCHARD will sell by auction, on THE GROUND, on WEDNESDAY, September the 8th, at 3 o'clock,
4 houses, situated in Duke-street, Woolloomooloo, known as Isabella-terrace, substantially built of brick, on stone foundation, shingled roofs.
These houses are always tenanted, and are let for some time past at the low rental of 10s per week each, but would easily fetch 12s per week. They are in thorough repair and will not require a shilling expended in repairs for some years to come.
Also,
14 small allotments of land, fronting Prince's-place, adjoining the above. Upon four of these allotments is a splendid quarry of stone, above the level already opened, loose and ready to cut out.
Terms, cash.
No reserve.

TWO HOUSES
TWO COTTAGES.

Prospect-street, Lower Paddington, off Gipps-street, near Glenmore Road, and the Tollbar.

W. PRITCHARD will sell by auction, on the ground, on FRIDAY, September 10th, at 3 o'clock,
Two houses, built of stone, shingled roofs, containing each 4 rooms, kitchen, verandah and balcony, and good well of water.
Also,
Two cottages adjoining above, built of brick on stone foundations, shingled roofs, containing each 3 rooms and shed.
Terms at sale.

☞ QUAMBI.—THE PROPRIETOR, who leaves the colony NEXT MONTH, has furnished SPECIAL PEREMPTORY INSTRUCTIONS for the ABSOLUTE DISPOSAL of this property
ON FRIDAY NEXT.

QUAMBI,
A Commodious FIRST-CLASS MANSION, with Extensive HIGHLY IMPROVED GROUNDS,
ALBERT-STREET, WOOLLAHRA.

RICHARDSON and WRENCH have received instructions from JOHN BREWSTER, Esq. (in consequence of his projected departure from the colony), to sell by public auction, at the Rooms, Pitt-street, on FRIDAY, 10th September, at 11 o'clock,
That first-class highly finished commodious family mansion,
QUAMBI,
together with TWO ACRES AND A HALF of highly improved ORNAMENTAL GROUNDS, having extensive frontage to
ALBERT-STREET, WOOLLAHRA,
one of the choicest sites in that beautiful favourite locality, overlooking Double Bay, the harbour, and surrounding picturesque scenery.
THE HOUSE, built principally of stone, in a massive and most substantial manner, has a handsome elevation with spacious balcony, and a number of verandahs. The principal apartments are entered from a wide hall laid with well designed encaustic tiles, the walls delicately oil painted, and having an iron lined plate closet built in. They comprise:—
A handsome double DRAWING-ROOM, over 31 feet in length, and elegantly decorated.
DINING-ROOM, with oriel window, 34 x 20, a noble apartment.
LIBRARY, 18½ x 16; DAY NURSERY, 18 x 16; BREAKFAST ROOM, 17½ x 12.
The UPPER APARTMENTS are approached by a fine wide staircase and corridor. They include NINE BEDROOMS, one of which, above the dining-room, is 34 x 20; linen closet, bathroom (plunge and shower, with hot and cold water laid on), patent closet, lavatory and housemaid's pantry.
IN THE BASEMENT are lofty, dry, well-ventilated wine cellar, dairy, &c.
THE FINISH of the internal work is very superior throughout. The windows are of plate glass, hung on copper chain cord; doors fitted with patent adjusting hinges; and the ceilings, walls, and cornices, in the principal rooms, richly and tastefully decorated.
The OUT-OFFICES are very extensive and complete, comprising double kitchen, fitted with full-size Leamington stove and cooking range, having two hot water self-feeding boilers supplying kitchen, bathroom, butler's pantry, &c.; laundry, with copper, and water laid on; butler's pantry, fitted with shelves; hot water and drain sink; lavatory, with self-acting tap; patent closets, tool house, amateur workshop, &c.
Above the kitchen are two servants' apartments. At the rear, sufficiently distant from the house, and approached by a distinct avenue entrance, are three-stall stable, flagged and drained; double coach-house, harness-room, shed, large hay loft, groom's room, dry and well-drained pig-stye, cow-house and yard, fowl-house, drying ground, &c.
The WATER SUPPLY, both to HOUSE and OUT-OFFICES, is UNLIMITED IN ALL SEASONS. In addition to iron and other tanks above ground, holding upwards of 12,000 GALLONS, supplied from the roofs, there are two NEVER-FAILING SPRING WELLS, fitted with powerful double-action pumps, which will force the water to the most distant part of the premises. This latter, however, is rarely if ever used, the tank water being found ample for family requirements.
The DRAINAGE from all parts of the premises is perfect in every respect.
THE GROUNDS surrounding Quambi contain an area of TWO ACRES AND A HALF. They are laid out with considerable ARTISTIC SKILL into SHRUBBERIES, brilliant well-arranged MASSES of EVERGREENS, closely shaven LAWN, LAWNS, delightfully SECLUDED WALKS, lined with PARTERRES of CHOICE and RARE FLOWERING PLANTS; in the midst of which there are a perfect bush house with ample water supply, forcing frames; a FOUNTAIN and MINIATURE POND, full of GOLDEN CARP. LAVISH PROFUSION, tempered with EXCELLENT TASTE, have combined to render this portion of the property a
HIGHLY-FINISHED HORTICULTURAL GEM.
In the grounds there are a small orchard of picked trees, and a vegetable garden; also a lucerne paddock.
THE SITE is one of the most valuable in this POPULAR and BEAUTIFUL suburb. It has a northern aspect, and commands those lovely UNINTERRUPTED GLIMPSES of HARBOUR SCENERY for which the locality is so noted.

☞ QUAMBI is in the market for ABSOLUTE SALE, in consequence of the proprietor's retirement from business and departure from the colony. It is one of the most HIGHLY FINISHED among the many HANDSOME FAMILY RESIDENCES in this FAVOURED NEIGHBOURHOOD, and will be found on inspection to possess an AMPLITUDE of CONVENIENCE, a PERFECTION of COMFORT and DOMESTIC TASTE which could only be COMPLETED by SLOW INGENUITY, and much EXPENSE, THOUGHT, and LABOUR.
TERMS. Half the purchase money can remain at 6 per cent.
TITLE—Point Piper leasehold.

CARDS to VIEW may be obtained on application at the Rooms; where also architect's plan of the accommodation may be inspected.

WITHOUT ANY RESERVE,
BY ORDER OF THE MORTGAGEE.

NEWTOWN RAILWAY STATION.

WELL-FINISHED COMMODIOUS FAMILY RESIDENCE and LARGE BLOCK OF LAND, occupied by Captain Moore, and COTTAGE adjoining.

RICHARDSON and WRENCH have received instructions to sell by public auction, at the Rooms, Pitt-street, on FRIDAY, 10th September, at 11 o'clock,
All that CORNER BLOCK OF LAND, being lots 140 to 144 of section 4 of NORTH KINGSTON ESTATE, having 82½ feet frontage to WELLINGTON-STREET, and 181½ feet to LENNOX-STREET, and 824 feet to REGENT-STREET, upon which are erected the following, fronting Wellington-street:—
A REALLY DESIRABLE FAMILY COTTAGE RESIDENCE, containing nine rooms, kitchen, and servant's room, with large yard, paddock, stable, &c., at the rear.
A SUBSTANTIALLY ERECTED VERANDAH COTTAGE, containing four rooms, kitchen, and servant's room, with yard, &c., at the rear.
The above-described freehold is most favourably situated in the best part of the rapidly-improving suburb of NEWTOWN, at the RAILWAY STATION, and only a few yards from the OMNIBUS STAND.
Cards to view can be obtained at the Rooms.
Terms at sale.

CHOICE VILLA SITE.

BURWOOD RAILWAY STATION,
being allotments 5 and 6, section N, of the Cheltenham Estate, having 110 FEET FRONTAGE TO THE BURWOOD ROAD, adjoining the south side of the CONGREGATIONAL CHURCH, with a depth of 200 FEET, extending down, and having frontage to TERMINUS-TERRACE.
* * This is a VALUABLE VERY FAVOURABLY SITUATED CORNER SITE in this FAVOURITE and BEAUTIFUL SUBURB, with extensive frontage to the main thoroughfare (a well-made good road), a few yards from the BURWOOD RAILWAY STATION.

RICHARDSON and WRENCH have received instructions to sell by public auction, at the Rooms, Pitt-street, on
FRIDAY, 10th September, at 11 o'clock.
The above desirable corner block of land, at Burwood.
Plan on view at the Rooms.

FOR POSITIVE SALE.

QUEEN-STREET, GLEBE.

BRICK-BUILT COTTAGE in QUEEN-STREET, on the north side, west of BAY-STREET, and now in the occupation of Mr. G. WILLIAMS.
It contains 4 rooms, yard with side entrance, water laid on, &c., at the rear.
The land has 30 FEET frontage to QUEEN-STREET, with a depth of 83½ feet.

RICHARDSON and WRENCH have received instructions to sell by public auction, at the Rooms, Pitt-street, on FRIDAY, 10th September, at 11 o'clock,
The above small freehold at the Glebe.
TITLE—Apply to J. WILLIAMSON, Esq., Solicitor, Elizabeth-street.

By order of the Trustees of the Will of the late Mr. JOHN SMEDLEY.

VALUABLE CITY PROPERTIES.
PALMER-STREET.
PITT-STREET.

RICHARDSON and WRENCH have received instructions to sell by public auction, at the Rooms, Pitt-street, on
FRIDAY, 10th September, at 11 o'clock,
1—PALMER-STREET,
A few feet north of William-street.
All that block of land having a frontage of 49½ FEET to PALMER-STREET, between the properties of Messrs. Spence and Fitzpatrick, in one or three lots, as follows:—
THREE BUILDING ALLOTMENTS, each having 16½ feet frontage to Palmer-street, extending to Oatley-lane, with a depth of 92½ feet. On portion of the Oatley-lane frontage is a comfortable Cottage Residence of 4 rooms, lobby, kitchen, laundry, &c.
, This fine block of land will be sold either in one lot or subdivided to meet the views of buyers. The situation is one of the best in Woolloomooloo, a little to the north of William-street, and adjoining first-class properties.

2—PITT-STREET.
East side, about 100 feet south of Liverpool-street,
All that allotment of land, having a frontage of 23½ FEET to PITT-STREET, with a depth of about 82 feet, on which is a shop and dwelling-house, containing 5 rooms, detached kitchen; also a building, 2 rooms, at the rear, with yard, &c., approached by common archway entrance from the street.
, This property adjoins Mr. Wilson's, No. 402, Pitt-street, a little beyond Cameron's Factory, at the corner of Liverpool-street.

☞ Both the above lots are for positive sale by the trustees of the estate, and from their position will be found worthy the attention of parties seeking eligible city investments.
Plans on view at the Rooms.

JOHN DAWSON and SON,
Solicitors, Pitt-street.

THE BURIAL GROUND!
DEATH OF LADY DEDLOCK.

NEW AND MAGNIFICENT SCENERY
by Messrs. WILSON and KINCHELA.

OPINIONS
of some of the American journalists respecting Madame JANAUSCHEK as
LADY DEDLOCK and HORTENSE
in BLEAK HOUSE

"All her attitudes are as beautifully statuesque as the finest models of Greece and Rome. She thrills us by her sublime eloquence and power."
—NEW YORK HERALD.

"The mind will always connect Janauschek with Kemble and Kean. She rivals Rachael, but we feel a pride in the life of the great Bohemian not so in that of the Frenchwoman. She is destined to reform our stage."
—HARPER'S WEEKLY.

"Janauschek in this play was the embodied expression of the author's thoughts. Higher praise it is impossible to bestow, and that was the universal verdict."
—AUGUSTA SENTINEL.

"Janauschek's performance is thrilling in its dramatic force and intensity."
—BOSTON POST.

"We know of no artist upon the stage at present who is her equal in strength, emotion, and thoughtful intensity."
—BOSTON GLOBE.

"It is impossible to believe in the identity of the representative of Lady Dedlock and Hortense. The dual impersonation is the consummated perfection of art. Janauschek's genius is more thoroughly and completely tragic than that of any other artist whom we can recall. Her pathos and passion are of the strongest and truest quality, being inspired as it were by nature itself, and free from all artificial or weak extravagance."
—BOSTON DAILY ADVERTISER.

"We know of no other actress capable of the parts. Her Lady Dedlock is extraordinary in its vigorous intensity, and alone stamps her as a great artist."
—BOSTON GAZETTE.

"Her interview with Esther is one of the grandest scenes ever witnessed upon the stage for vivid natural tragic power."
—BOSTON TIMES.

"In Dickens's tremendous creation, Bleak House, Madame Janauschek deserves the freshest laurels we have to bestow. We wonder at her living through the performance. Besides the wearing passion, the labour of assuming her elaborate dresses must be immense."
—PHILADELPHIA TIMES.

"The delineation of Hortense in its intense truthfulness was magnificent."
—WORCESTER DAILY PRESS.

"JANAUSCHEK IN 'CHESNEY WOLD.'—The peerless Janauschek has been with us, and we are satisfied. Weak performers and sham shows may reign in the Opera House from now through summer, but the memories of the great Sclavonic actress and her renditions of the disgraced lady and the vengeful French waiting maid in 'Chesney Wold' will fill the measure of our desire for tragic acting until another shall come worthy to be called an actor."
—SPRINGFIELD DAILY REPUBLICAN.

"The magnificent costumes of Janauschek deserve mention. In one scene of the second act of the drama, Lady Dedlock wears certainly not less than twenty thousand dollars' worth of diamonds. Magnificent solitaire earrings, necklace of brilliants, each as large as a coffee-grain, bracelets of the same, and a miniature Koh-i-noor on her bosom, made the heroine fairly ablaze with gems."
—PHILADELPHIA SUNDAY TIMES.

"The play receives the impress of genius from Janauschek."
—SUNDAY TRANSCRIPT, PHILADELPHIA.

"Janauschek has achieved one of the exceptional triumphs by her performance of Hortense. We think highly of her personation of Lady Dedlock, in the same play; it is certainly very fine."
—PHILADELPHIA SUNDAY DISPATCH.

For a hundred other similar eulogies of this incomparable actress, see Madame Janauschek's critique book, to be obtained from J. Allison, Queen's Theatre.

Private boxes, £2 2s.; dress circle, 5s.; stalls, 3s.; pit, 2s.
